Development of a Lipase-Based Optical Assay for Detection of DNA

Suttiporn Pinijsuwan, Stepan Shipovskov, Werasak Surareungchai, Elena E. Ferapontova and Kurt V. Gothelf*
Figure S1. The calibration of curve of NPO molarity and concentration at 405 nm in 200 µl of TRIS-HCl buffer, pH 7.5. Concentration of lipase 2.5 µg/ml.
**Figure S2.** The activity of the lipase from *Candida antarctica* (●), lipase-biotin (○) and MB-lipase (▼) were assayed at varying concentration of enzyme incubation on 0.1mM *p*-nitrophenyl octanoate (NPO) for 4 hr.
