Cells were incubated for 72 h and T cell proliferation and production was assessed. Splenocytes were incubated with medium, p-HBADs alone or in the presence of anti-CD3e. Cells were incubated for 72 h and T cell proliferation and IFN-γ production was assessed.

**Figure 3.** Flow cytometry data. p-HBADs suppress IFN-γ production by CD4+ T cells. Splenocytes were incubated with medium, p-HBADs alone or in the presence of anti-CD3e. Cells were incubated for 72 h and T cell proliferation and IFN-γ production was assessed.
