Fig. S2: Expanded $^1$H- NMR spectra of L$_4$ in DMSO-d$_6$. 
Fig. S3: $^{13}$C- NMR spectra of L1 in DMSO-d$_6$. 
Fig. S4: Expanded $^{13}$C- NMR spectra of L₁ in DMSO-d₆.
Fig. S5: $^1$H- NMR spectra of $L_2$ in CDCl$_3$. 
Fig. S6: Expanded $^1$H- NMR spectra of L$_2$ in CDCl$_3$. 
Fig. S7: $^{13}$C- NMR spectra of L$_2$ in CDCl$_3$. 
Fig. S8: Mass spectrum of \( \text{L}_1 \) (positive mode), Expected \( m/z \) for \( \text{C}_{21}\text{H}_{19}\text{N}_6\text{O}_3 \) \( (\text{L}_1+\text{H})^+ \) = 403.1519, Found 403.1546.
Fig. S9: Mass spectrum of zinc complex of $L_1$ (positive mode). Expected $m/z$ for $C_{23}H_{21}Cl_3N_7O_{15}Zn_2$ ($L_1$+2Zn+3ClO$_4$+CH$_3$CN) = 869.8713, found 869.8240.
Fig. S10: Expanded mass spectrum of zinc complex of $L_1$ (positive mode).
**Fig. S11:** Job’s plot between \( L_1 \) and \( \text{Zn}^{2+} \).

**Fig. S12:** Benesi–Hildebrand plot between \( L_1 \) and \( \text{Zn}^{2+} \).
**Fig. S13:** Visual color change upon the addition of Zn$^{2+}$ to L$_1$ solution.
Fig. S14: $^1$H-NMR titration of $L_1$ with $\text{Zn}^{2+}$ in DMSO-$d_6$. 
Cytotoxicity assay for L$_1$ and L$_1$-Zn complex

A standard MTT assay was performed to determine the cytotoxic effect of L$_1$ and L$_1$–Zn complex on HeLa cells. MTT (3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyltetrazolium bromide) solution was procured from Sigma-Aldrich, USA. Initially HeLa cells were grown in 25 cm$^2$ tissue culture flask in Dulbecco’s modified Eagle medium (DMEM) supplemented with 10% (v/v) fetal bovine serum (FBS), penicillin (100g/mL) and streptomycin (100µg/mL) at 37°C in a CO$_2$ incubator. Prior to MTT assay, cells were seeded onto 96-well tissue culture plates (approximately 10$^4$ cells per well) and incubated with various concentrations of compound L$_1$ and L$_1$–Zn complex (5.0µM, 12.5µM, 15µM, 25µM and 50µM) made in DMEM for a period of 24h. HeLa cells treated with DMSO or Zn(ClO$_4$)$_2$ alone were also included in parallel sets. Following 24 h incubation, the growth media was carefully aspirated and fresh DMEM containing MTT solution was added to the cells and incubated for 3–4 h at 37°C. Subsequently, the MTT solution was removed and the insoluble colored formazan product was solubilized in DMSO and its absorbance was measured in a microtitre plate reader (Infinite M200, TECAN, Switzerland) at 550 nm. MTT assay for every sample was performed in six sets. Data analysis and calculation of standard deviation was performed with Microsoft Excel 2010 (Microsoft Corporation, USA).
