**General Methods and Materials**

Guanosine, succinic anhydride, (1-ethyl-3-(3-dimethylaminopropyl)carbodiimide hydrochloride (EDCI.HCl), 1-Hydroxybenzotriazole (HOBt) were purchased from commercial sources. Hydroxy terminated polybutadienes were purchased from Polymer source Inc. NMR spectra were recorded on a Bruker AV300 MHz and AV500 MHz spectrometers, using CDCl$_3$, as the solvent and tetramethyl silane (TMS) as internal standard and used as such without further drying.

For mixed solvent study 1.25mM solution of octamer was prepared in 0.5 mL of CDCl$_3$ and gradually added DMSO-$d_6$, the percent of DMSO-$d_6$ used was (v/v). Mass spectrometry analyses were performed using an electron ionization (EI) MS spectrometer (Micromass AutoSpec-Ultima). UV-visible spectroscopic analysis was performed on JASCO V-670 UV-Vis-NIR spectrophotometer. Circular dichroism spectroscopic analysis was performed on JASCO J-715 spectrometer using 1.0 mm path length and 0.3 mL quartz cuvette.

**Synthesis**

**General esterification procedure:** A mixture of guanosine acid (0.575 g, 1.36 mmol), EDCI.HCl (0.374 g, 1.81 mmol), HOBt (0.245 g, 1.81 mmol), DMAP (0.03 g, 0.27 mmol), and hydroxy terminated polybutadiene ($M_n = 1000$) (10. g, 0.90 mmol) in pyridine (12 mL) was stirred at 25 °C for 48 h. Pyridine was removed under reduced pressure and the crude mixture was purified by column chromatography (DCM/MeOH, 95:5) using KMnO$_4$ as TLC stain to yield 0.82 g of polymer 1 (Yield = 59%). $^1$H-NMR (δ, ppm, 500 MHz, CDCl$_3$): 12.01 (s, 1H, NH), 7.60 (s, 1H), 6.14 (br s, 2H), 5.94 (s, 1H), 5.57 – 5.25 (br m, 50H), 4.98 (m, 8H), 4.62 (m, 1H), 4.42 (m, 1H), 4.21 (m, 1H), 4.12 – 3.99 (m, 2H), 3.60 – 3.36 (m, 1H), 2.62 (s, 4H), 2.08 – 1.18 (br m, 116H), 0.86 (m, 8H); $^{13}$C-NMR (δ, ppm, 125 MHz, CDCl$_3$): 172.59, 172.54, 172.37, 159.35, 153.71, 151.26, 142.93, 142.88, 141.71, 141.64, 136.98, 131.45, 131.10, 130.78, 130.72, 130.64, 130.33, 130.22, 129.83, 129.65, 129.46, 129.18, 129.01, 128.70, 128.55, 128.27, 128.09, 118.18, 115.97, 115.83, 115.39, 115.27, 114.65, 114.54, 114.45, 114.15, 113.82, 90.69, 85.04, 84.64, 81.87, 71.01, 69.69, 68.69, 64.66, 64.27, 64.01, 63.52, 43.95, 43.84, 43.73, 41.80, 41.63, 41.57, 40.83, 40.74, 39.92, 39.29, 38.39, 35.32, 35.26, 35.10, 35.05, 34.48, 34.42, 34.33, 34.18, 33.75, 33.65, 32.89, 30.27, 29.43, 29.22, 27.68, 27.40, 25.64, 25.19, 25.09, 25.02,
23.79, 19.99, 19.36, 19.25, 18.90, 11.80, 11.70, 11.61; UV/Vis (chloroform) $\lambda_{\text{max}} = 256$ nm.

Polymers 2, 3 and 4 were synthesized in a similar fashion.

**Polymer 2:** (Yield = 41%) $^1$H-NMR ($\delta$, ppm, 500 MHz, CDCl3): 12.03 (s, 1H, NH), 7.60 (s, 1H), 6.19 (br s, 2H), 5.95 (s, 1H), 5.55 – 5.26 (br m, 60H), 4.96 (m, 9H), 4.62 (m, 1H), 4.42 (m, 1H), 4.21 (m, 1H), 4.06 (m, 2H), 3.60 – 3.43 (m, 1H), 2.63 (s, 4H), 2.08 – 1.11 (br m, 131H), 0.84 (m, 8H); $^{13}$C-NMR ($\delta$, ppm, 125 MHz, CDCl3): 172.57, 172.52, 172.36, 159.35, 153.68, 151.27, 142.92, 142.86, 141.70, 141.62, 136.96, 131.46, 131.08, 130.78, 130.72, 130.64, 130.31, 130.04, 129.82, 129.64, 129.46, 129.18, 129.01, 128.70, 128.55, 128.27, 128.09, 118.15, 115.94, 115.80, 115.24, 114.64, 114.52, 114.43, 90.71, 85.05, 84.64, 81.87, 71.00, 69.68, 68.67, 64.65, 64.26, 64.00, 63.51, 53.62, 43.98, 43.85, 43.74, 41.82, 41.64, 41.58, 40.85, 40.75, 39.93, 39.30, 38.40, 35.34, 35.28, 35.12, 35.05, 34.49, 34.44, 34.34, 34.20, 33.75, 33.65, 32.90, 30.28, 29.44, 29.24, 27.69, 27.42, 25.65, 25.19, 25.09, 25.03, 23.78, 19.99, 19.38, 19.25, 18.92, 11.82, 11.72, 11.61; UV/Vis (chloroform) $\lambda_{\text{max}} = 256$ nm.

**Polymer 3:** (Yield = 40%) $^1$H-NMR ($\delta$, ppm, 500 MHz, CDCl3): 12.08 (s, 1H, NH), 7.61 (s, 1H), 5.98 (br s, 2H), 5.95 (s, 1H), 5.56 – 5.26 (br m, 200H), 4.97 (m, 20H), 4.64 (m, 1H), 4.42 (m, 1H), 4.19 (m, 1H), 4.11 – 4.03 (m, 2H), 3.61 – 3.40 (m, 1H), 2.63 (s, 4H), 2.16 – 1.12 (br m, 500H), 0.86 (m, 12H); $^{13}$C-NMR ($\delta$, ppm, 125 MHz, CDCl3): 172.52, 172.50, 172.37, 159.26, 153.81, 151.17, 142.91, 142.85, 141.71, 141.62, 136.93, 131.45, 131.12, 130.78, 130.80, 130.70, 130.66, 130.32, 130.18, 129.81, 129.60, 129.44, 129.18, 129.03, 128.70, 128.53, 128.29, 128.12, 118.20, 115.97, 115.80, 115.37, 115.29, 114.66, 114.56, 114.48, 114.18, 113.80, 90.70, 85.06, 84.60, 81.88, 71.03, 69.69, 68.66, 64.65, 64.28, 64.03, 63.55, 43.98, 43.85, 43.74, 41.82, 41.64, 41.58, 40.85, 40.75, 39.93, 39.30, 38.40, 35.34, 35.28, 35.12, 35.05, 34.49, 34.44, 34.34, 34.20, 33.75, 33.65, 32.90, 30.28, 29.44, 29.24, 27.69, 27.42, 25.65, 25.19, 25.09, 25.03, 23.78, 19.99, 19.38, 19.25, 18.92, 11.82, 11.72, 11.61; UV/Vis (chloroform) $\lambda_{\text{max}} = 256$ nm.

**Polymer 4:** (Yield = 25%) $^1$H-NMR ($\delta$, ppm, 500 MHz, CDCl3): 12.06 (s, 1H, NH), 7.61 (s, 1H), 5.94 (s, 1H), 5.76 (br s, 1H), 5.56 – 5.25 (br m, 380H), 4.97 (m, 40H), 4.65 (m, 1H), 4.42 (m, 1H), 4.18 (m, 1H), 4.11 – 4.03 (m, 2H), 2.63 (s, 4H), 2.14 – 1.13 (br m, 1109H), 0.86 (m, 12H); UV/Vis (chloroform) $\lambda_{\text{max}} = 256$ nm.
**General self-assembly procedure:** All the polymeric building blocks (1, 2, 3 and 4) were thoroughly washed with Millipore water to remove any metal-cation impurity that may be present in the material (these metal-cation impurities can come from the multistep synthetic protocols necessary for the preparation of the building blocks). All the building blocks were then dried under high vacuum conditions and stored at (-30) °C.

A stock solution of KI was prepared in acetone. Required amount of the KI solution was placed in a glass vial and the acetone was removed completely under reduced pressure. Then, known amount of the desired polymer building block (1, 2, 3 and 4) was added to this vial. Chloroform was then added and the mixture was stirred overnight. Removal of chloroform gave access to the octameric assemblies, $1_8.K^+$, $2_8.K^+$, $3_8.K^+$, $4_8.K^+$ in the semi-solid form. These samples were the dried and used for further studies. However, it is difficult to say if trace amounts of water was present or absent from the systems due to the complexity in the 1-2 ppm region of the $^1$H-NMR spectra. Concentrations of the arm and the octamer were based on their respective molecular weights.
