Synthesis and Characterization of Thermally Cured Polytriazole Polymers Incorporating Main or Side Chain Benzoxazine Crosslinking Moieties

Y.S. Ye, Y.J. Huang, F.C. Chang, Z. G. Xue and X. L. Xie

a Key Laboratory for Large-Format Battery Materials and Systems, Ministry of Education, School of Chemistry and Chemical Engineering, Huazhong University of Science and Technology, Wuhan 430074, China.
b Department of Materials and Optoelectronic Science, Nation Sun Yat-Sen University, Kaohsiung, Taiwan.
Materials

The following reagents and solvents were purchased from commercial suppliers and used as received unless otherwise noted: p-Xylylene dichloride (Sigma-Aldrich, 98%), sodium azide (Sigma-Aldrich, ≥99%), bisphenol A (Sigma-Aldrich, 97%), tetrabutylammonium bromide (99%, Sigma-Aldrich), propargyl bromide (80 wt.% solution in toluene, ACROS), 3,5-dihydroxybenzoic acid (Alfa-Aesar, 98%), propargylamine (ACROS, 99%), 18-crown-6 (ACROS, 99%), 1,2-diaminoethane (TEDIA, 99%), paraformaldehyde (Alfa-Aesar, 97%), phenol (Sigma-Aldrich, 99%), potassium carbonate (Sigma-Aldrich, 99%), sodium hydroxide (Sigma-Aldrich, ≥97%), potassium hydroxide (Sigma-Aldrich, ≥97%), sulfuric acid (Scharlau, 98%), anhydrous magnesium sulfate (99%, Sigma-Aldrich), N,N-Dimethylformamide (DMF) (TEDIA, 99.8%), toluene (TEDIA, 99.5%), tetrahydrofuran (THF) (TEDIA, 99.8%), benzene (Sigma-Aldrich, 99.8%), ethanol (TEDIA, ≥99.5%), methanol (TEDIA, ≥99.5%), acetone (TEDIA, ≥99.5%), chloroform (TEDIA, ≥99.8%), ethyl acetate (EA) (TEDIA, ≥99.5%), dioxane (TEDIA, ≥99.0%), n-hexane (TEDIA, ≥95.0%), and glacial acetic acid (TEDIA, ≥99.7%). The deionized (DI) water used in all reactions, solution preparations, and polymer isolations was purified to a resistance of 18 MΩ (Milli-Q Reagent Water System, Millipore Corporation). Silica particles (diameter: 3 μm) were obtained from Polysciences, Inc. (USA). Copper(I) iodide (≥97%, Riedel-de Haën) was washed with glacial acetic acid to remove any soluble oxidized species and then it was filtered, washed with ethanol, and dried.

Synthesis of Monomers

1,4-BIS(AZIDOMETHYL)BENZENE (BAB). p-Xylylene dichloride (8.8 g, 50 mmol), sodium azide (9.75 g, 150 mmol), DMF (100 mL), and benzene (100 mL) were added into a three-necked round-bottom flask equipped with a magnetic stirrer and a reflux condenser. The reaction mixture was slowly heated to 80 °C and then maintained at that temperature for 12 h and then poured into a beaker containing deionized water (200 mL). The organic layer was separated and the aqueous layer extracted three times with benzene. The combined organic phases were dried overnight (MgSO₄) and then the benzene was evaporated to yield a light-yellow solid. [Scheme 1 (a)]

Yield: 83%; mp = 27-29 °C; ¹H NMR (DMSO-d₆), ppm: δ = 4.44 (a), 7.38 (b) [Figure S1 (a)]. ¹³C NMR (CDCl₃), ppm: δ = 54.03 (1), 129.58 (2), 136.20 (3) [Figure S1 (b)].

4,4’-(PROPANE-2,2-DIYLBIS((PROP-2-YNYLOXY)BENZENE) (PBPB). Bisphenol A (11.4 g, 50 mmol), sodium hydroxide (6 g, 150 mmol), deionized water, and tetrabutylammonium bromide
(1.6 g, 5 mmol) were placed in a three-necked round bottom flask equipped with a magnetic stirrer, a reflux condenser, and a nitrogen gas inlet tube, after which the regents were heated to 80 °C. Propargyl bromide (14.87 g, 125 mmol) was added dropwise over 3 h and then the mixture was maintained at 80 °C for 10 h. The reaction product was washed several times with deionized water to remove tetrabutylammonium bromide and the salt formed in the reaction. The product was obtained through recrystallization with ethyl alcohol. [Scheme 1 (b)]

Yield: 89%; mp = 78 °C; $^1$H NMR (CDCl$_3$), ppm: $\delta$ = 1.67 (a), 2.54 (b), 4.68 (c), 6.91 (d), 7.19 (e) [Figure S2 (a)]; $^{13}$C NMR (CDCl$_3$), ppm: $\delta$ = 31.36 (1), 42.16 (2), 56.10 (3), 75.59 (4), 79.07 (5), 114.61 (6), 128.20 (7), 144.20 (8), 155.69 (9) [Figure S2 (b)].

**Methyl 3,5-dihydroxybenzoate (1).** 3,5-dihydroxybenzoic acid (10 g, 65 mmol), sulfuric acid (1 ml) and methanol (125 ml) were placed in a three-necked round bottom flask equipped with a magnetic stirrer. The reaction mixture was heated to 90 °C under nitrogen for 24 hours and then the solvent was evaporated to dryness, and the crude product was washed several times with deionized water until the pH was in the range 6-7. The product was obtained through recrystallization in methanol to give the white crystals. [Scheme 1 (c)]

Yield: 92%; mp = 168 °C; $^1$H NMR (DMSO-d$_6$), ppm: $\delta$ = 3.76 (a), 6.42 (b), 6.80 (c), 9.63 (d) [Figure S3 (a)]; $^{13}$C NMR (DMSO-d$_6$), ppm: $\delta$ = 52.88 (1), 107.89 (2), 132.20 (3), 159.39 (4), 166.91 (5) [Figure S3 (b)].

**Methyl 3,5-bis(prop-2-ynyloxy)benzoate (2).** To a stirred solution of methyl 3,5-dihydroxybenzoate (16.8 g, 100 mmol) and propargyl bromide (29.7 g, 220 mmol) in acetone (300 ml) were added potassium carbonate (15.1 g, 109 mmol) and 18-crown-6 (0.1 g, 0.4 mmol). The reaction mixture was heated at reflux under nitrogen for 24 hours, filtered and evaporated to dryness. The crude material was then crystallized in methanol to give the ester as pale yellow crystals. [Scheme 1 (c)]

Yield: 82.6%; mp = 110 °C; $^1$H NMR (DMSO-d$_6$), ppm: $\delta$ = 3.59 (a), 3.84 (b), 4.84 (c), 6.87 (d), 7.15 (e) [Figure S4 (a)]; $^{13}$C NMR (DMSO-d$_6$), ppm: $\delta$ = 53.38 (1), 56.64 (2), 79.32 (3), 79.69 (4), 107.89 (5), 109.14 (6), 132.20 (7), 159.02 (8), 166.54 (9) [Figure S4 (b)].

**N-Aminoethyl 3,5-bis(propargyloxy)benzamide (3).** A solution of methyl 3,5-bis(prop-2-ynyloxy)benzoate (6.25 g, 25.6 mmol) in 30 mL of methanol was added dropwise into a stirred solution of 1,2-diaminoethane (73.9 g, 1.23 mol) in 120 mL of methanol at 0 °C. After the addition was completed (within ~ 1 h), the mixture was allowed to warm to room temperature and was then stirred for 96 h. The solvent was removed under reduced pressure using a rotary evaporator at a temperature below 40 °C. Subsequently, the excess 1,2-diaminoethane was removed using an azeotropic mixture of toluene and methanol (9:1 v/v).
After drying in a vacuum oven for 24 h, the compound 3 was obtained as yellowish oil. [Scheme 1 (c)]
Yield: 92%; \textsuperscript{1}H NMR (CDCl\textsubscript{3}), ppm: \(\delta = 2.02\) (a), 2.47 (b), 2.83 (c), 3.38 (d), 4.61 (e), 6.63 (f), 6.96 (g, h) [Figure S5 (a)]; \textsuperscript{13}C NMR (CDCl\textsubscript{3}), ppm: \(\delta = 41.04\) (1), 42.39 (2), 56.06 (3), 76.03 (4), 78.04 (5), 105.03 (6), 106.69 (7), 136.70 (8), 158.68 (9), 167.02 (10) [Figure S5 (b)].
