Figure Captions

**Fig. S1** Influence of (A) the pH value, (B) the Triton concentration, (C) the salt concentration and (D) the Ca$^{2+}$ concentration on the heterologous-coating-antigen ELISA for TC. The right-hand axes display the maximum absorbance (OD$_{\text{max}}$) values, and the left axes display the IC$_{50}$ values expressed in units of ng mL$^{-1}$. The IC$_{50}$/OD$_{\text{max}}$ values were used to select the optimal conditions for the ELISA.

**Fig. S2** Calibration curves for the heterologous ELISA for tetracycline in PBS and in PBS-diluted milk.

Tables Captions

**Table S1** Recoveries of TC in fortified milk (µg L$^{-1}$)
