Figure S1. TEM image of core-shell nanoparticles obtained by UV light irradiated PDDA stabilized Au NPs and subsequent the polymerization reaction of silica under the PH=10, 0.2 vol% in 1.2 mL 2-propanol.
**Figure S2.** TEM images of Au@SiO$_2$ core-shell particles with different shell thicknesses under the PH=10, (a) 2 nm with 0.1 vol% in 1.2 mL 2-propanol, (b) 4 nm with 0.2 vol% in 1.2 mL 2-propanol, (c) 5 nm with 0.3 vol% in 1.2 mL 2-propanol, (d) 8 nm with 0.4 vol% in 1.2 mL 2-propanol.

**Figure S3.** Black line is Zeta potential of pure PDDA-stabilized Au NPs, the red line is Zeta potential of Au NPs which were treated by ultraviolet light.

**Figure S4.** IR Spectrum of the PDDA-stabilized Au NPs, black line is PDDA-stabilized Au NPs without ultraviolet light treatment and red line is PDDA-stabilized
Au NPs after treated by UV light irradiation
