Content:

1. Fig. 1 Optical texture for 2a at 51°C (a), for 2b at 77°C (b) and for 2c at 92°C (c)  p.2

2. Fig. 2 Optical texture for 3a at 50°C in SmA phase (a); the same region when irradiated in the 280-320 nm range (b); picture of 3a in solid state at 25°C (c); picture of 3a in solid state at 25°C irradiated in the 280-320 nm range (d)  p.2

3. Fig. 3 Optical texture for 3b at 45°C (left); the same region when irradiated in the 280-320 nm range (right)  p.3

4. Fig. 4 Optical texture for 3c at 129°C  p.3

5. Fig. 5 Fingerprint texture of a mixture of 3c in 5CB (1%) recorded at 29°C  p.3

6. Fig. 6 DSC traces of 2a, first heating – cooling cycle (left) and second heating-cooling cycle (right)  p.4

7. Fig. 7 DSC traces of 2b, first heating-cooling cycle (left) and second heating-cooling cycle (right)  p.4

8. Fig. 8 DSC trace for 2c (first heating run)  p.4

9. Fig. 9 DSC trace for 2c, first (left) and second (right) heating cooling cycle up to 120°C  p.5

10. Fig. 10 DSC traces of 3a, first heating-cooling cycle (left) and second heating-cooling cycle (right)  p.5

11. Fig. 11 DSC traces of 3b, first heating-cooling cycle (left) and second heating-cooling cycle (right)  p.5

12. Fig. 12 DSC traces of 3c (second heating cooling cycle in the 10 – 180°C range)  p.6

13. Fig. 13 The TG curves for bis(imidazolium) salts 2a-c and their silver carbene complexes 3a-c  p.6

14. Fig. 14 X-ray powder diffraction pattern for 2a recorded at 44°C on cooling from isotropic liquid (left) and for 2a recorded at 50°C on cooling from isotropic liquid (right)  p.7

15. Fig. 15 X-ray powder diffraction pattern for 2b recorded at 65°C on cooling from isotropic liquid (left) and for 2b recorded at 60°C on cooling from isotropic liquid (right)  p.7

16. Fig. 16 X-ray powder diffraction pattern for 2c recorded at 81°C on heating from glassy state  p.8

17. Fig. 17. Powder X-ray diffraction pattern for 2c at different temperatures  p.8

18. Fig. 18. Powder X-ray diffraction pattern for 3c at different temperatures  p.9

19. Fig. 19 The solid state emission spectra (recorded as 10% w/w in PMMA films) of bis (imidazolium) salts 2a-c and their silver carbene complexes 3a-c  p.9
