SUPPORTING INFORMATION

Additional data on cell adhesion and fibronectin reorganization is included.
Supplementary Figure S1. Focal adhesion proteins talin and paxillin for MC3T3-E1 cells after 3 h on the different FN-coated surfaces. Scale bar is 30 μm.
**Supplementary Figure S2.** MC3T3-E1 cells after 1 day on the different FN-coated surfaces. First row/line shows focal adhesion protein vinculin, second one F-actin cytoskeleton. The third one shows superposition including DAPI-stained nuclei. (scale bar 30 µm).
**Supplementary Figure S3.** Cellular reorganization and secretion of FN on the different substrates after 2.5h, 5 h, 1 d and 5 d of culture. Actin cytoskeleton is included in the bottom images for the sake of cell identification.
