TABLE CAPTIONS

Table S1: Loading curves for each indentation, including class (Soft, Stiff or Tough). Series abbreviations refer to surface crosslinking type (H – hexamethylene di-isocyanate, I – isophorone di-isocyanate and P – non-surface-crosslinked), functionalization type (F – fluorine, O – hydroxyl) and indented region (A, B, C, D, E).

Figure S1: Percentage distributions of Classes for indentation of unmodified crosslinked surfaces.

Table 1 Loading curves for each indentation, including class (Soft, Stiff or Tough). Series abbreviations refer to surface crosslinking type (H – hexamethylene di-isocyanate, I – isophorone di-isocyanate and P – non-surface-crosslinked), functionalization type (F – fluorine, O – hydroxyl) and indented region (A, B, C, D, E).
