Photo-induced transformation from wormlike to spherical micelles based on pyrrolidinium ionic liquids

Han Yan, a, b Yue Long, b Kai Song, b Chen-Ho Tung, b Liqiang Zheng*, a

Supporting Information

Fig. S1 Typical rheograms of 100 mM C_{16}MPBr solutions with 40 (a, b), 60 (c, d), 70 (e, f) and 80 mM (g, h) AzoNa before UV irradiation: (a, c, e, g) Viscosity against shear rate plot with a Newtonian plateau, showing a shear-thinning response; (b, d, f, h) dynamic frequency sweep which displays a strongly viscoelastic response.
