AFM images of PEDOT:PSS Nanofilms after post-treatment

Figure S1. AFM images of PEDOT:PSS nanofilms: (a) pristine, (b) DMSO-treated, and (c) treated with a mixture of DMSO/HZ. All images captured an area of 1×1 μm\textsuperscript{2}.
Change of carrier concentration and carrier mobility as a result of the dedoping process.

Figure S2. Carrier concentration and carrier mobility of PEDOT:PSS nanofilms after various post-treatment with different ratios of DMSO/HZ mixture solutions. The concentration and mobility were obtained by Hall-effect measurement.
