Figure. S1. (a) Simulated and experimental curves for $\Delta f/n$ (n = 3, 5, 7) and $\Delta D_n$ versus time for exposure (**) of SiO$_2$ surfaces to 50% plasma solutions, followed by exposure (**) to saline solutions for rinsing step. The best fit between the viscoelastic model and the experimental data is shown. (b) Thickness versus time determined from the fit shown in (a).
