**Figure S1** Zeta potentials of NP (A) and REDV-NP (B), the samples were prepared in PBS (pH = 7.4, 0.1 M).

**Figure S2** The fluorescence images of EA.hy926 cells mediated by REDV-NP/pZNF580 complexes at the N/P molar ratio of 10 for incubating 0 h (A), 6 h (B), 12 h (C), 24 h (D).
Figure S3 Fluorescence micrographs of SMCs (A) and ECs (B) with REDV-NP/pZNF580 complexes after 24 h co-culture, image of SMCs marked by α-SMA (red), image of ECs marked by FITC (green).
