

Biomass Health and Safety Workshop

Overview/objective:

With the arrival of the Government's new Renewable Heat Incentive, a significant expansion in the deployment of renewable heat systems over the next decade is expected. Biomass systems have potential across a wide range of commercial, industrial, educational, public and residential applications and now is the right time for serious consideration to the commercial and carbon benefits delivered from biomass.

Although Biomass can deliver significant cost and carbon reductions for many businesses, reliability and safety are of paramount importance. The implementation of biomass often presents a new set of design challenges for even established boiler manufacturers and installers. However safe and reliable operation can readily be achieved with robust design review. Biomass Systems, like all boiler plant, must be designed in accordance with the provisions of the CDM2007 regulations.

Whilst biomass is an established technology – it is relatively new in the UK and this Carbon Trust/CEA introductory workshop examines and considers the best approach to ensuring safe, reliable and profitable design for Biomass.

Who should attend?

- Clients – those considering biomass installation
- Designers – those designing biomass installations
- Health and Safety Managers
- Energy Managers

When & where:

Thursday 8th December, The Quality Hotel Selby
Junction A1/A63, Nr. Leeds, South Milford LS25 5LF

Registration commences at 9:00, event starts at 9:30,
event concludes at 15.30 – lunch provided

Why attend?

The design and operation of biomass systems give rise to less familiar Hazards. Sadly the evolution of biomass has also been accompanied by injury and at least one fatality. As an owner, designer or operator this event will give you an insight into the health and safety provisions you must make for Biomass systems. With experiences drawn from numerous installations around the UK this event will provide you with practical advice and guidance for safe, reliable and profitable operation.

Topics to be covered include

- The RHI and revenue support – overview
- The legislative framework
- Safety regulation and ACOPS
- Hazard evaluation and risk assessment
- Fuel delivery, Fuel storage, Combustion, Emissions, Ash handling,
- COSHH, Confined Spaces regulations, Work at height regulations et al.

Registration and fees

The cost for the event is £75 per delegate.
