

Suspensionology

One-Day Course on Practical Suspension Formulation

17th June 2015, University of Lincoln, UK

The Course

Suspensionology has been developed by iFormulate with the benefit of industry feedback to provide you with the essential practical and theoretical understanding of how suspensions and dispersions can be made, stabilised and characterised.

Why Attend?

In a compact one-day interactive training course, you'll learn:

- The differences between suspensions, emulsions, mixtures and solutions;
- Which ingredients go into making a stable suspension;
- The underlying theories of suspension stability;
- How to characterise suspension formulations;
- How to produce suspensions in the lab and in large scale.

Attendees will receive full course materials on a memory stick.

Outline Course Programme

- The Definition of a Suspension
- Suspension Ingredients
- Theoretical Aspects
- Characterisation Techniques
- Manufacturing Suspensions
- Laboratory Tour

Venue

Suspensionology will be held at the Joseph Banks Laboratories, University of Lincoln. Lincoln is one of the UK's most historic cities and its thriving University is rapidly becoming a force in Chemistry and the Life Sciences. We are delighted to be running this course in association with the School of Chemistry and the Head of Chemistry, Professor Ian Scowen, will be one of our course tutors.

In association with:

UNIVERSITY OF
LINCOLN

Registration

£299 + VAT per person for registrations received by 27th March 2015

£349 + VAT per person for registrations received after 27th March 2015.

To register please e-mail info@iformulate.biz with your full details and say whether you'd like to pay via invoice to your organisation or credit/debit card (via PayPal). For the latter option we have to charge a surcharge to cover PayPal fees.
