

# Direct Analysis Mass Spectrometry

Techniques and  
Applications

21<sup>st</sup> April 2010

**Alderley Park Conference Centre, AstraZeneca, Alderley Park, Cheshire**

The development and application of ambient ionisation techniques is a rapidly growing area within mass spectrometry, the availability of ionisation in the open-air makes sample analysis particularly simple and no sample preparation may be required. The variety of ionisation techniques (DART, DESI, DAPCI, ASAP, LDTD, FlashQuant etc) have been applied to a broad range of applications and this seminar will be an opportunity to find out more about these techniques.

To book your place just register at  
[www.bmss.org.uk/registration](http://www.bmss.org.uk/registration)

£50 BMSS or RSC members • £75 non-members • £25 students

Contact the BMSS or RSC to check if  
bursaries are available to students.
