

#106

SEABORGIUM

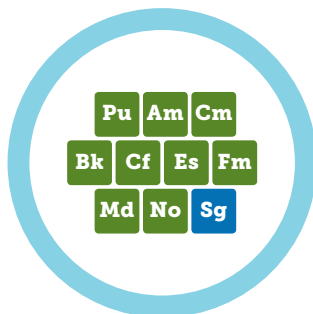

Sg

106

[269]

NAME

The first element named after a living person: Glenn Seaborg, the co-discoverer of 10 elements.

NAME DISPUTES

Though seaborgium was created in 1974, arguments over its name meant it wasn't confirmed until 1997.

SHORT-LIVED

Seaborgium's longest-lived isotope has a half-life of around 14 minutes. It has no uses outside research.
