Contents

Fig. S1 *CC plots (background subtraction) of DNA₁₅, DNA₂₅ or DNA₃₅/MCH mixed SAMs on gold in 50 μM RuHex, 10 mM tris-HCl (pH 7.4) solution.*

Fig. S2 *EIS plots of DNA₁₅, DNA₂₅ or DNA₃₅/MCH mixed SAMs on gold in 2 mM Fe(CN)₆^{3-/4-}, 50 mM NaCl and 5 mM sodium phosphate buffer solution (pH 7.0).*

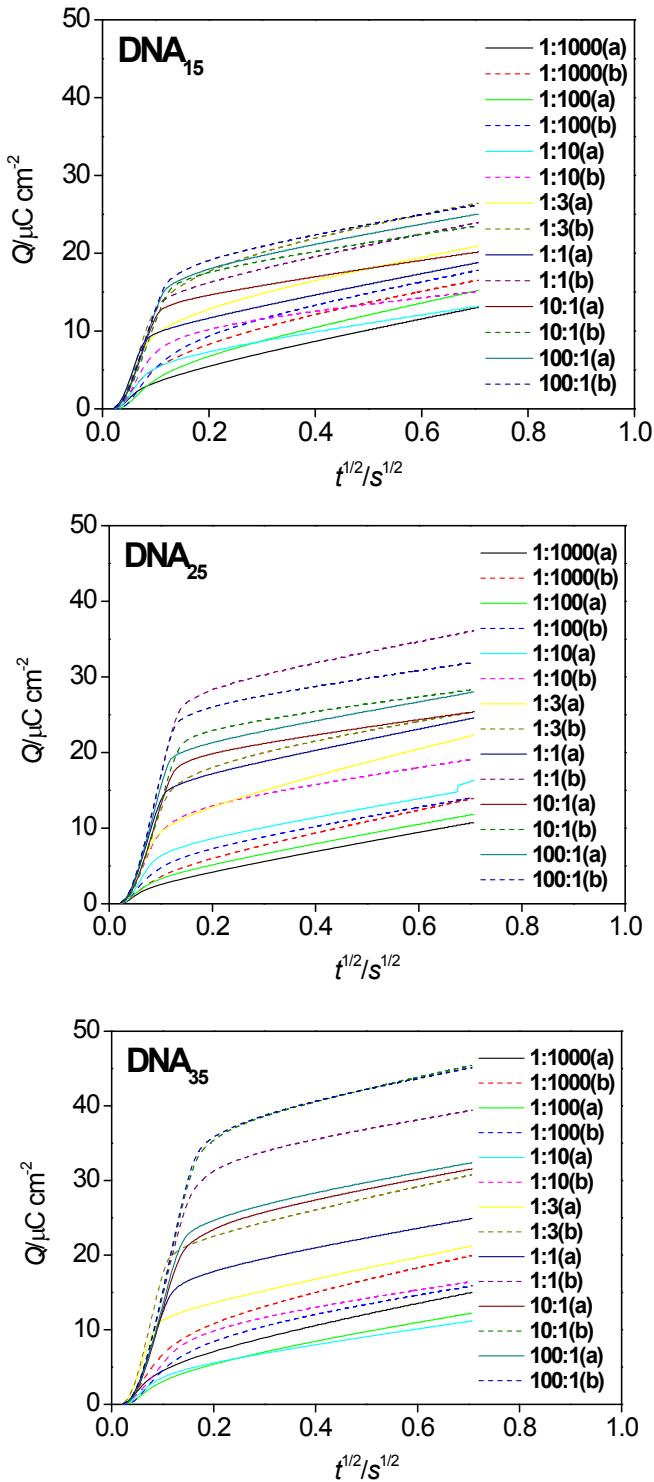

Fig. S1 CC plots (background subtraction) of DNA₁₅, DNA₂₅ or DNA₃₅/MCH mixed SAMs on gold in 50 μM RuHex, 10 mM tris-HCl (pH 7.4) solution. The concentration ratios of probe DNA and MCH for mixed assembly ($C_{\text{DNA}}/C_{\text{MCH}} = 1:1000, 1:100, 1:10, 1:3, 1:1, 10:1 \text{ and } 100:1$) were investigated. The “a” and “b” in the bracket represented “before hybridization” and “after hybridization” for probe DNA/MCH mixed SAMs.

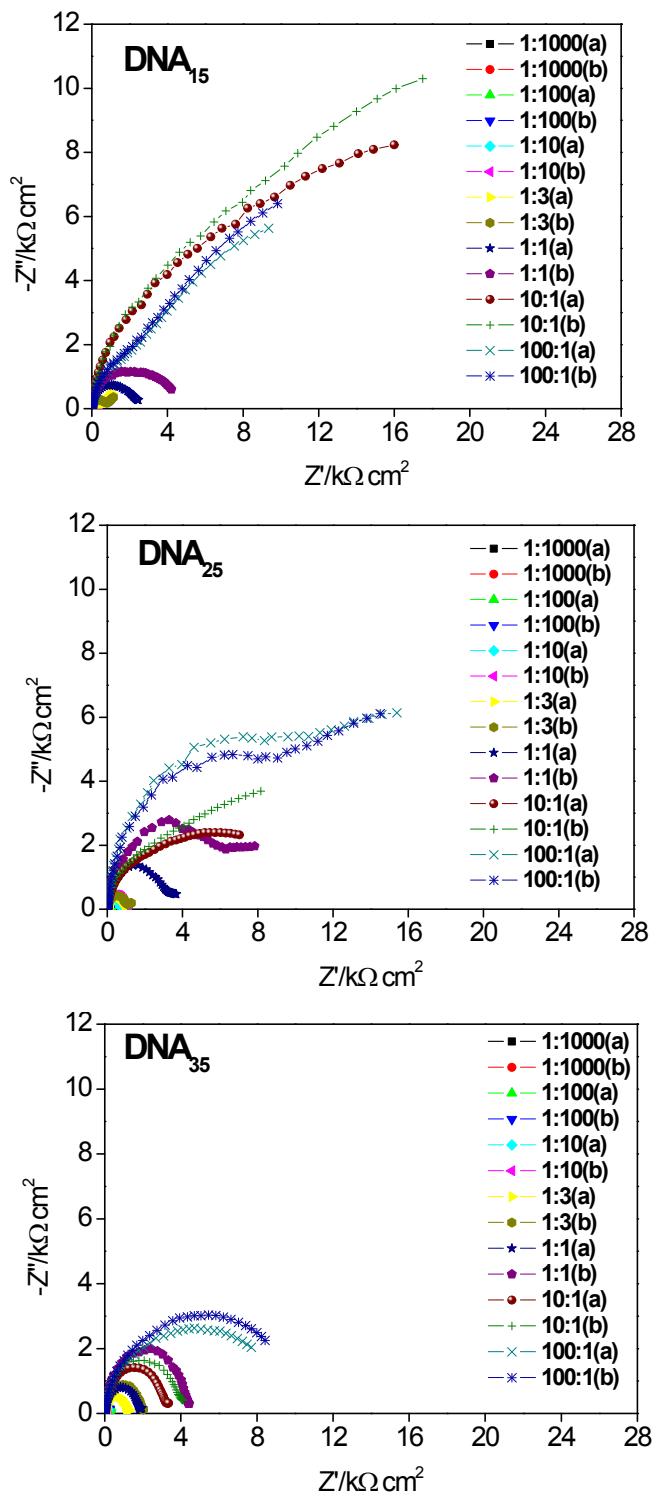

Fig. S2 EIS plots of DNA_{15} , DNA_{25} or DNA_{35} /MCH mixed SAMs on gold in 2 mM $\text{Fe}(\text{CN})_6^{3-/-4-}$, 50 mM NaCl and 5 mM sodium phosphate buffer solution (pH 7.0). The concentration ratios of probe DNA and MCH for mixed assembly ($C_{\text{DNA}}/C_{\text{MCH}} = 1:1000, 1:100, 1:10, 1:3, 1:1, 10:1$ and $100:1$) were investigated. The “a” and “b” in the bracket represented “before hybridization” and “after hybridization” for probe DNA/MCH mixed SAMs.
