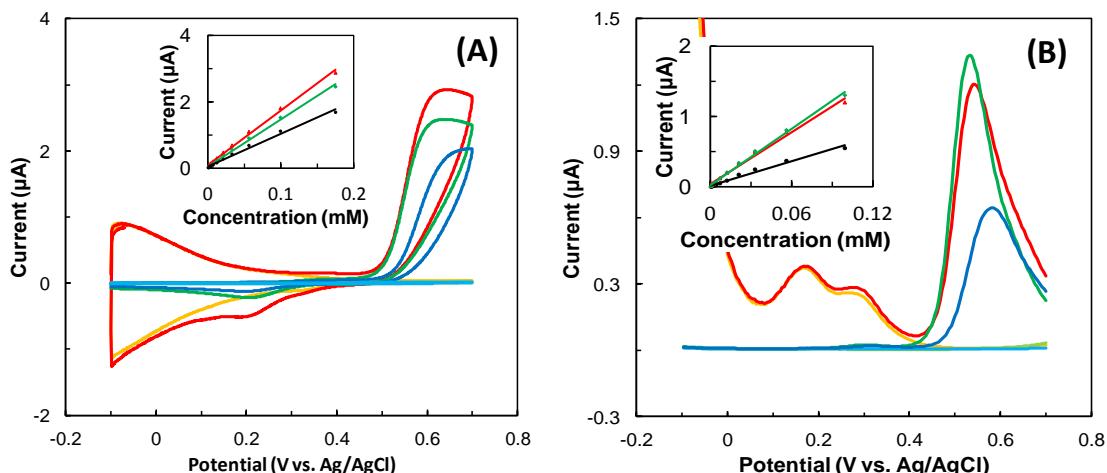

Fig S1: CV (A) and DPV (B) response of 0.17 mM and 0.1 mM *p*-ethylguaiacol respectively, at SnO₂ modified (red), TiO₂ modified (green) and unmodified (blue) SP electrodes. The inserts display the concentration effect within the linear range of *p*-ethylguaiacol oxidation at SnO₂ (red), TiO₂ (green) and unmodified SP (blue).

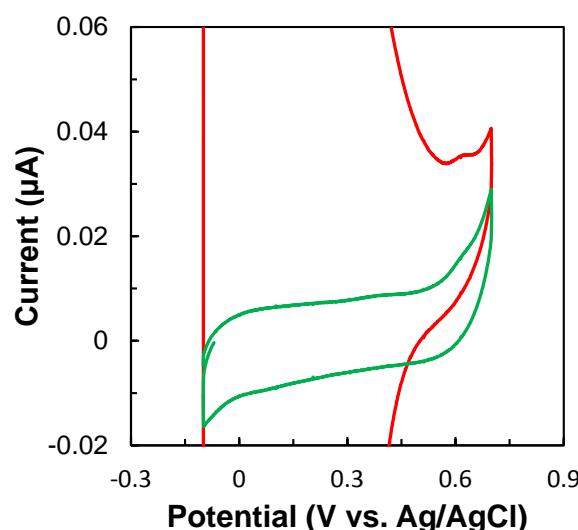

Fig S2: CV response of SnO₂ (red) and TiO₂ (green) modified SP electrodes without *p*-ethylguaiacol.
