

Electronic Supplementary information

Table 5: Accuracy (%) and precision (RSD) measured on spiked ultrapure water samples; an example of intra-day reproducibility data determined by repeating measurements of four different Pig 1 samples on two different days. Values reported for intra-day reproducibility are the average of two measurements, while error is given as the relative standard deviation of those measurements. Average MLQs observed in decomposition fluids are also given.

Compound	QA data on spiked ultrapure water samples		Intra-day reproducibility measured in decomposition fluids				Average MLQ in decomposition fluids (ng/µL)
	Accuracy (%)	Precision (RSD)	Pig 1 5.9.07 µg/µL (±RSD)	Pig 1 7.9.07 µg/µL (±RSD)	Pig 1 10.9.07 µg/µL (±RSD)	Pig 1 11.9.07 µg/µL (±RSD)
