

Supplementary Data

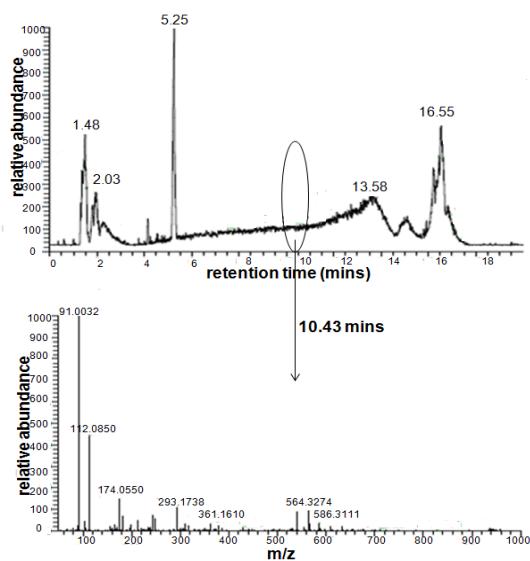

Figure S1. Base peak chromatogram for IEC separated ADOM peak 3 with extracted mass spectrum for a compound eluting at 10.43 minutes.

5 Flow rate 0.8 mL/min, capillary 4500 V, collision energy 20 eV, nebulizer 10.0 psi, dry gas 5.00 L/min, dry temperature 350 °C.

10 Table S1. Retention times, retention factors (k) and peak efficiency data (N) for the 50 $\mu\text{g}/\text{mL}$ mixed sugar standard mixture prepared to optimise the IEC-PAD method. Flow rate 1.0 mL/min of a 50 to 100 mM KOH gradient, injected volume 25 μL . All standard and sample injections were performed in triplicate, with standard retention time and peak area data <5%.
