Keywords: Ultrahigh-performance liquid chromatography-tandem mass spectrometry (UHPLC-MS/MS);
Azocyclotin; Cyhexatin; Fruits; Residue analysis.

Fig.S1. Positive ion mass spectra of azocyclotin and cyhexatin in mass full scan mode;

Note: Azocyclotin yield an ion-source fragment in the selected conditions giving the $[M-C_2H_2N_3]^+$ (m/z 369.54) as the base peak ion when the cone voltage was 30V, the same as the protonated molecule $[M+H]^+$ of cyhexatin. The transition m/z corresponds to cleavage of a triazole group.
