

1 Supporting Materials

2 This information is supported to prove that the green fluorescent nuclei in **Fig. 7** are
3 caused by the EGFP expression, instead of by the bleed-through from blue DAPI.

4

5 Confocal microscopic images of the untransfected COS-7 cells. (a) Fluorescence blue
6 channel of cell nuclei, (b) fluorescence green channel of green fluorescent protein
7 expression, (c) fluorescence red channel of cell membranes, and (d) overlapped
8 image. Scale bars 10 μ m.
