

Supplementary Figure

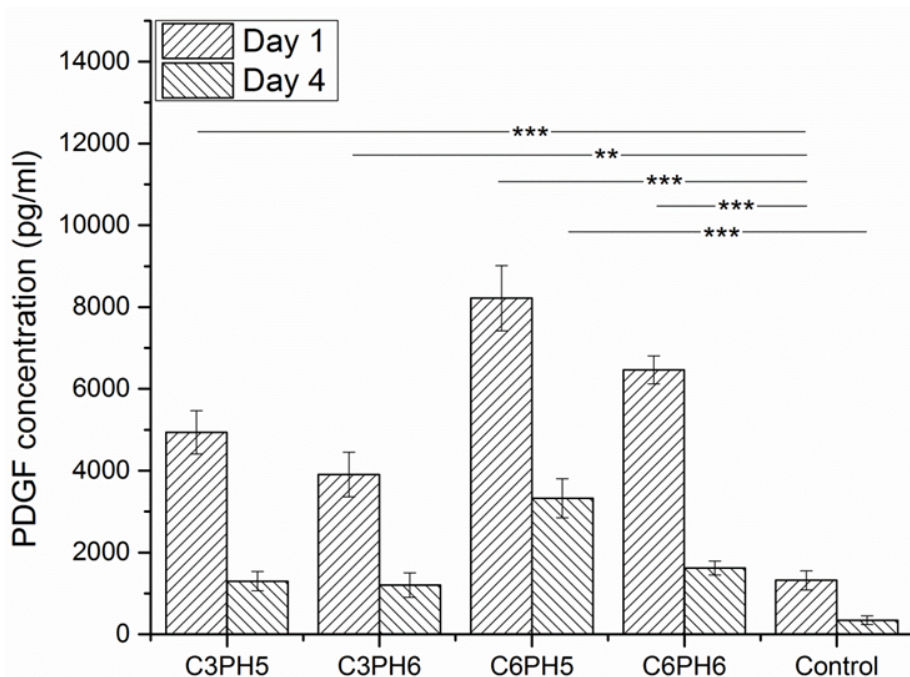

Fig.S1 PDGF availability (pg/ml) in the media in the presence of the sponges and the poly(ornithine)-coated cover slips (control) after 1 and 4 days. The PDGF concentration at day 1 in the presence of the all sponge formulations was significantly higher than the control. At day 4, C6PH5 had significantly higher PDGF in the media compared to controls. Values represent mean \pm SEM (n = 3, *P < 0.05, ** P < 0.01, *** P < 0.001).
