Oseltamivir-Conjugated Polymeric Micelles Prepared by RAFT Living Radical Polymerization as a New Active Tumor Targeting Drug Delivery Platform

Vitaliy Kapishon^a, Stephanie Allison^a, Ralph A. Whitney^b, Michael F. Cunningham^{*ab}, Myron Szewczuk^{*c} and Ronald J. Neufeld^{*a}.

Supporting Information:

Figure S1 ¹H NMR spectrum of oseltamivir-pPEGMEMA-RAFT in D₂O.

Figure S2 1 H NMR spectrum of oseltamivir-pPEGMEMA-RAFT in D₂O showing weak signals representing polymer end groups: RAFT and oseltamivir.

Figure S3 Dependence of molecular weight of pPEGMEMA on conversion (right) and $\ln([M_0]/[M])$ on time (left) during RAFT polymerization of PEGMEMA from oseltamivir-RAFT agent. Molecular weight was determined by GPC and conversion by ¹H NMR.
