## Supporting Information

## Fluorinated Polymer-grafted organic dielectrics for Organic Field-effect Transistors with low-voltage and electrical stability

Kyunghun Kim<sup>a</sup>, Haekyoung Kim<sup>b,\*</sup>, Se Hyun Kim<sup>c,\*</sup>, Chan Eon Park<sup>a,\*</sup>

<sup>a</sup> POSTECH Organic Electronics Laboratory, Polymer Research Institute, Department of Chemical Engineering, Pohang University of Science and Technology, Pohang 790-784 (KOREA)

<sup>b</sup> School of Materials Science and Engineering, Yeungnam University, Gyeongsan 712-749 (KOREA)

<sup>c</sup> School of Chemical Engineering, Yeungnam University, Gyeongsan 712-749 (KOREA)

**Figure S1.** (a) Optical images of seeded water and diiodomethane drops on the various substrates and (b) F 1s XPS profiles of PS (black) and F-PS (blue) devices. The values in (a) indicate the corresponding contact angle values and the resultant  $\gamma_s$  values are presented on the bottom.
