<b>Table S4:</b> The calculated thermodynamic and molecular parameters (298.15 K) for both conformations of Cl <sub>3</sub> CCH <sub>2</sub> OC(O)Cl calculated at B3LYP/6-311++G(d,p) level.....	11
<b>Table S5:</b> C–O, C–C and C=O bond lengths (Å), electron occupancy and energy (kJ·mol <sup>-1</sup> ) of the natural bond orbitals for Cl <sub>3</sub> CCH <sub>2</sub> OC(O)Cl. <sup>a</sup> .....	12
<b>Table S6:</b> The charge distribution calculated by the Mulliken method using DFT/B3LYP/6-311++G(d,p) for C <sub>1</sub> and C <sub>s</sub> conformers of Cl <sub>3</sub> CCH <sub>2</sub> OC(O)Cl.....	12
<b>Table S7:</b> Calculated Fukui functions ( $f_k^+$ , $f_k^-$ , $f_k^0$ ) and local reactivity properties ( $S$ and $\omega$ ).....	13

**Figure S1:** Graphical representation of the two conformers of  $\text{Cl}_3\text{CCH}_2\text{OC(O)Cl}$  with the corresponding direction of the dipole moment.

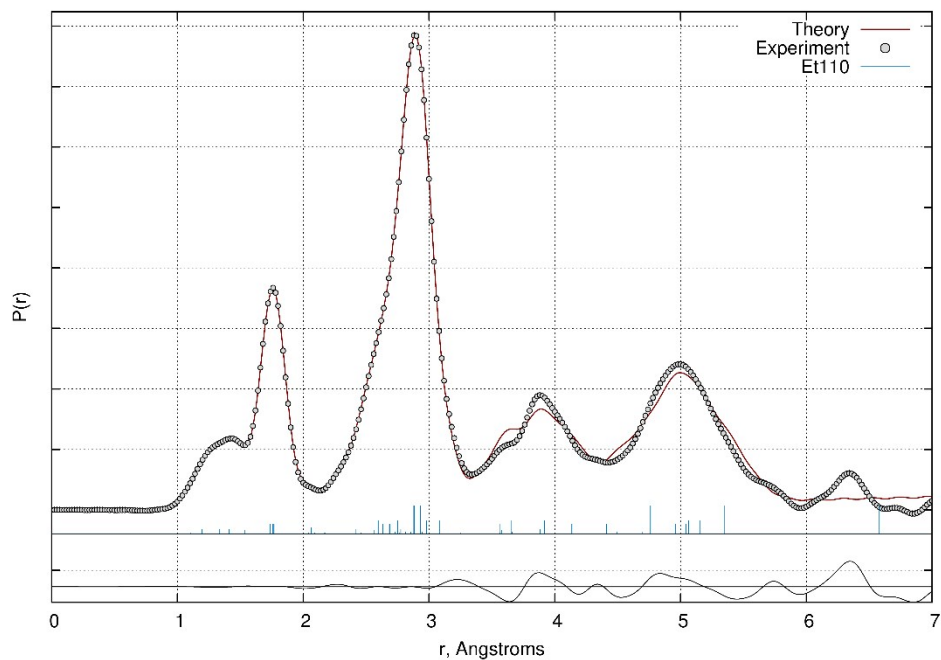

**Figure S2:** AIM plots for both conformers of  $\text{Cl}_3\text{CCH}_2\text{OC(O)Cl}$ . Red points indicate the bond critical points (BCP) for atomic interactions (on the atomic interactions lines, also called bond paths).

**Figure S3:** Theoretical (line) and experimental (dots)  $sM(s)$  curves as well as delta curve (below) from GED data refinement using the dynamic model.

**Figure S4:** Theoretical (line) and experimental (dots) radial distribution curves as well as delta curve (below) from GED data refinement using the *anti-gauche* model, only.

**Figure S5:** Theoretical (line) and experimental (dots)  $sM(s)$  curves as well as delta curve (below) from GED data refinement using the *anti-gauche* model, only.

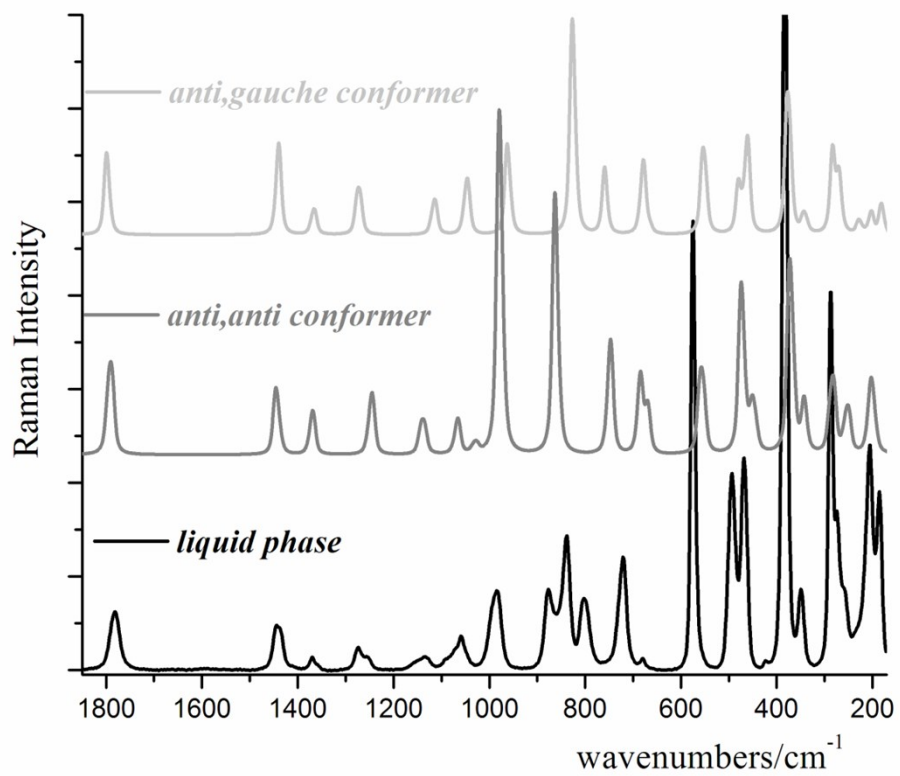

**Figure S6:** Theoretical (line) and experimental (dots) radial distribution curves as well as delta curve (below) from GED data refinement using the *anti-anti* model, only.

**Figure S7:** Theoretical (line) and experimental (dots)  $sM(s)$  curves as well as delta curve (below) from GED data refinement using the *anti-anti* model, only.

**Figure S8:** Simulated Raman spectra for both conformers of  $\text{Cl}_3\text{CCH}_2\text{OC(O)Cl}$  and the spectrum in liquid phase.

**Table S1:** Detailed conditions of the GED experiments.

	data set 1	data set 2
nozzle-to-plate distance (mm)	500	250
electron beam current (nA)	1000	1000
electron wavelength (Å)	0.048799	0.048636
exposure time (s)	10–15	10–20
background pressure (mbar)	$3 \times 10^{-7}$	$3 \times 10^{-7}$
residual gas pressure <sup>a</sup> (mbar)	$1 \times 10^{-6}$	$1 \times 10^{-6}$

<sup>a</sup> During recording.

**Table S2:** Optimized structural parameters (bond lengths, angles and selected dihedral angles) for both conformers of Cl<sub>3</sub>CCH<sub>2</sub>OC(O)Cl calculated at PBEPBE and MP2 methods with 6-311G(3df,2pd) basis sets as well as experimental ones obtained from gas electron diffraction data.

Parameter <sup>a</sup>	C <sub>1</sub> conformer			C <sub>s</sub> conformer			Experimental <sup>b</sup>

C(1)-O(3)-C(4)-C(5)	116.3	107.5	109.9	179.9	179.9	180.0	Fixed to 180.0

<sup>a</sup> Bond lengths in Å, angles in degrees. See Figure 2a and 2b for numbering of atoms.

<sup>b</sup> Values for conformer of C<sub>s</sub> symmetry, standard deviations given as 3σ<sub>LS</sub>, superscript numbers indicate the regularization coefficient, subscript letters state if parameters were refined in groups with fixed differences in between. The O(2)=C(1)-O(3) angle was not refined explicitly results from O(2)=C(1)-Cl(8), Cl(8)-C(1)-O(3) and the assumed planarity of the Cl(8)-C(1)-O(2)-O(3) moiety.

**Table S3:** Relative abundances (MP2/6-311G(d,p), 328 K) for pseudoconformers used in the dynamic model for structure refinement of gas-phase electron diffraction data.

$\Phi$ (pseudoconformer) / °	rel. abundance <sup>a</sup> / %
100	12.14 (2)
110	18.10 (2)
120	14.63 (2)
130	10.53 (2)
