

Supporting information

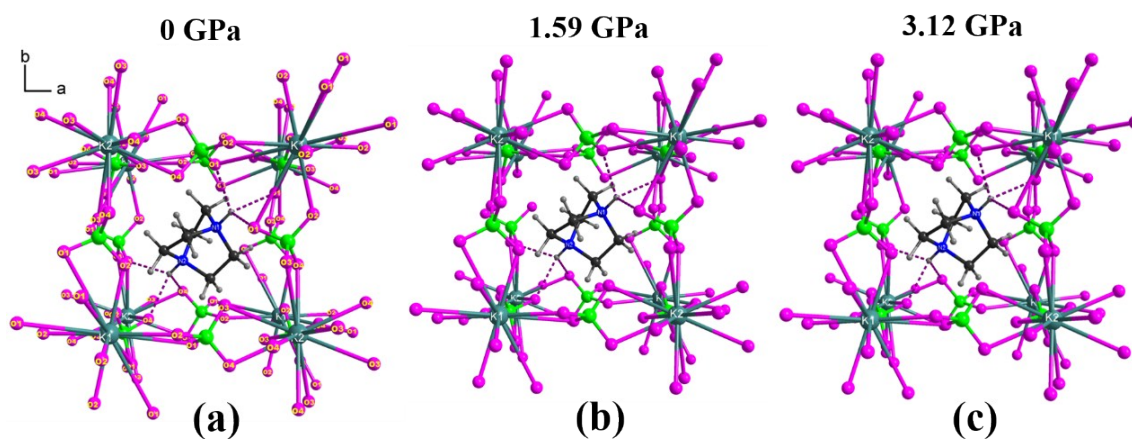

Fig. S1 The representation of the unit cell of $[\text{DABCOH}_2^{2+}][\text{K}(\text{ClO}_4)_3]$ viewed along the cell axis, at 0 (a), 1.59 (b) and 3.12 GPa (c), refined from DFT based on experimental cell parameters. Colour scheme: K^+ , teal; O, pink; Cl, green; C, black; N, blue; H, gray. N–H \cdots O bonds are represented as dashed purple lines.

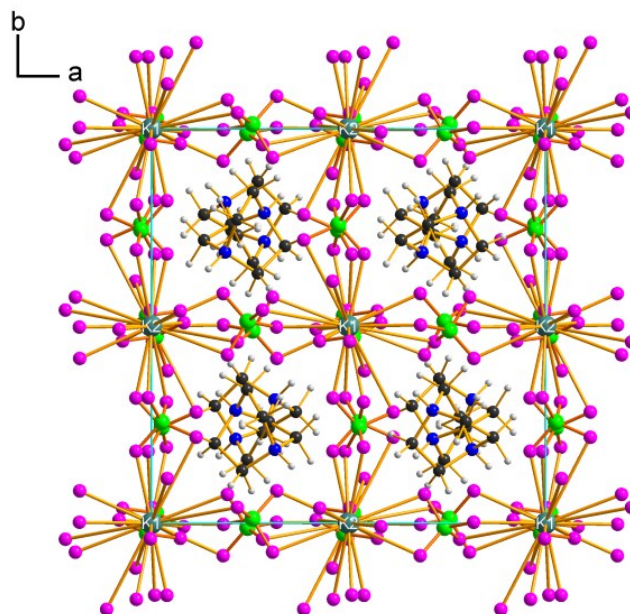

Fig. S2 The representation of the cell packing viewed along the cell axis. Colour scheme: K^+ , teal; O, pink; Cl, green; C, black; N, blue; H, gray.
