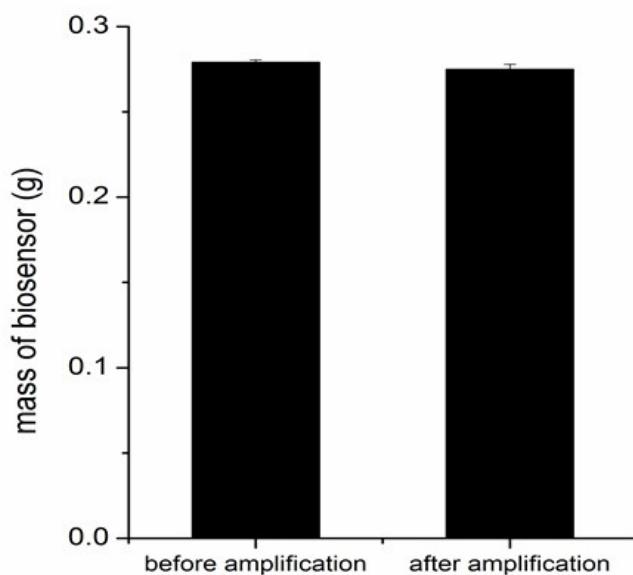

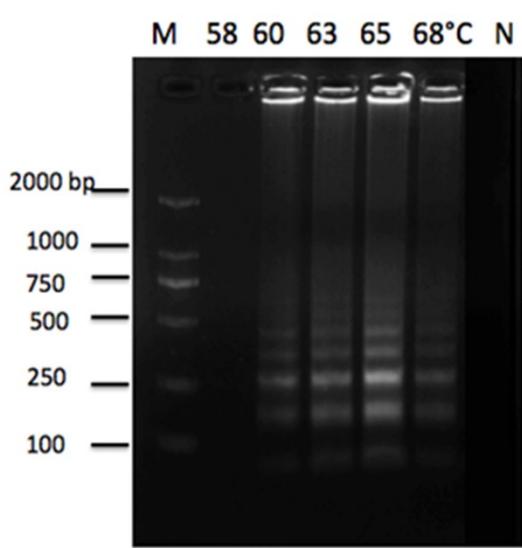

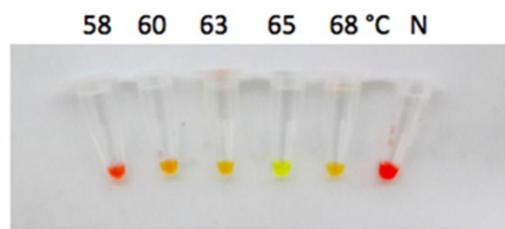

Figure S1. Evaluation of the risk of sample evaporation. There was no significant difference observed between the mass of biosensor before and after LAMP at 65 °C, indicating no risk of sample evaporation.

(A) Agarose gel electrophoresis

(B) SYBR Green I staining

(i) Visible light

(ii) UV light

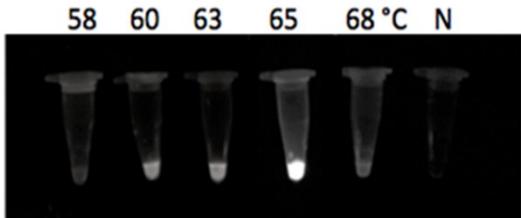

Figure S2. Optimization of paper-based LAMP temperature. The LAMP temperature of 65 °C was the optimum paper-based LAMP temperature based on the visible bands in electrophoresis (A), the dense yellowish-green under visible light (B) and bright fluorescent signal under UV light (C) after SYBR Green I staining (N = negative control, M= 100-2000 bp marker).

Supplementary Table 2. Specifications of the handheld battery-powered heating device.

Specifications	
Size of the device (L ×W ×H)	7 cm ×12 cm ×11 cm
Weight of the device	500 g
Temperature range	RT +5 - 100 °C
Temperature accuracy	±0.1 °C
Power supply	220V ± 10% 50 Hz
Maximum voltage	50 W
Material of heating compartment	aluminum alloy
Material of non-heating compartment	polyformaldehyde
Battery life-span	10 hr
