

Fig S8 (related to Fig. 4B). MiR-138 is downregulated in breast cancer. MiR-138 expression was analyzed by TaqMan RT-qPCR in non-tumorigenic human mammary epithelial cell line (MCF12A) and in six breast cancer cell lines (BT20, MCF7, MDA-MB-231, MDA-MB-361, SKBR3, and ZR-75-1). Results are normalized with respect to the endogenous control RNU6B (*= $p < 0,05$) (n=3).
