

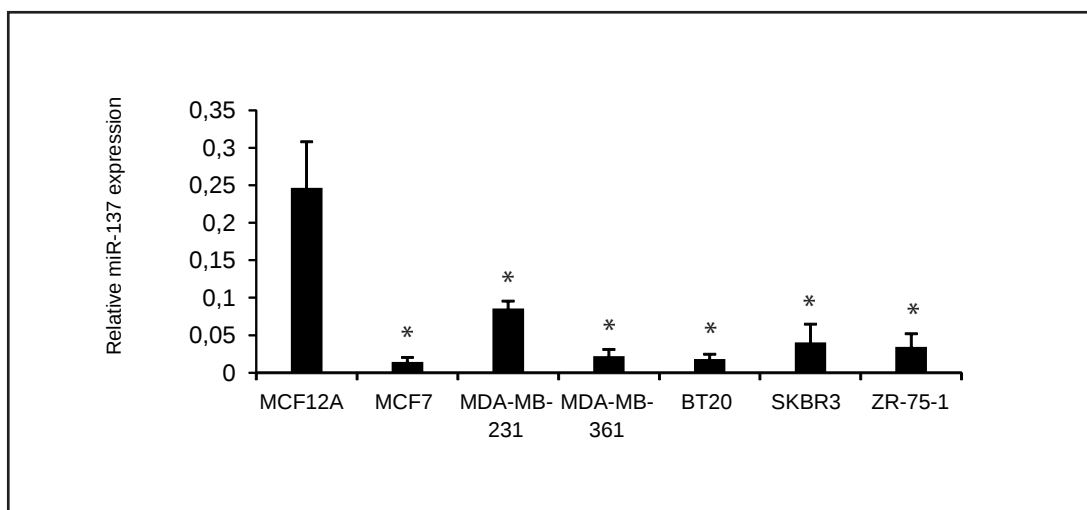

Fig S1 (related to Fig. 1A). MiR-137 is downregulated in breast cancer. MiR-137 expression was analyzed by TaqMan RT-qPCR in non-tumorigenic human mammary epithelial cell line (MCF12A) and in six breast cancer cell lines (MCF7, MDA-MB-231, MDA-MB-361, BT20, SKBR3, and ZR-75-1). Results are normalized with respect to the endogenous control RNU6B (*= $p < 0,05$) ($n=3$).
