

Supplementary tables

Table S1. Analysis of GO terms enriched by different sets of DEGs in each stage

Stages (GO terms)	Num. of GO terms enriched by all DEGs	Num. of GO terms enriched by up-regulated genes (overlaps with all DEGs)	Num. of GO terms enriched by down-regulated genes (overlaps with all DEGs)
Larva (BP)	2	0 (0)	4 (1)
Larva (MF)	10	4 (3)	22 (7)
Adult (BP)	1	2 (0)	1 (1)
Adult (MF)	9	4 (1)	11 (7)

Supplementary figures

Fig. S1. The PPI network in the larval stage. Up- and down-regulated genes are highlighted with red and green, respectively. The color scale is from saturated red (significantly up-regulated) to white (no significant change) and then to saturated green (significantly down-regulated).

Fig. S2. The PPI network in the adult stage. Up- and down-regulated genes are highlighted with red and green, respectively.
