

Supplementary Information

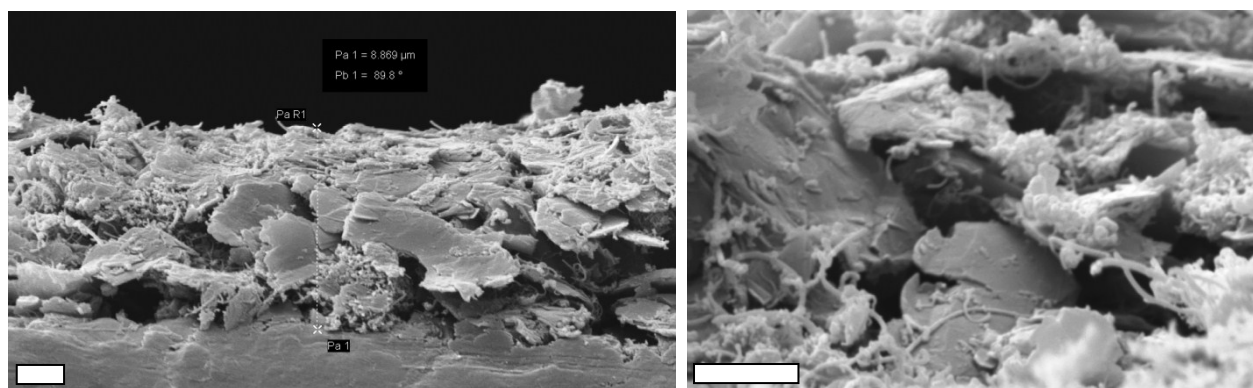

Fig. S1. Characteristic SEM images of the hybrid *pG/MWNT-f-OH* thin films from the cross sectional area before compression. The measured mean thickness is about 9 μm. The bars are 2 μm.

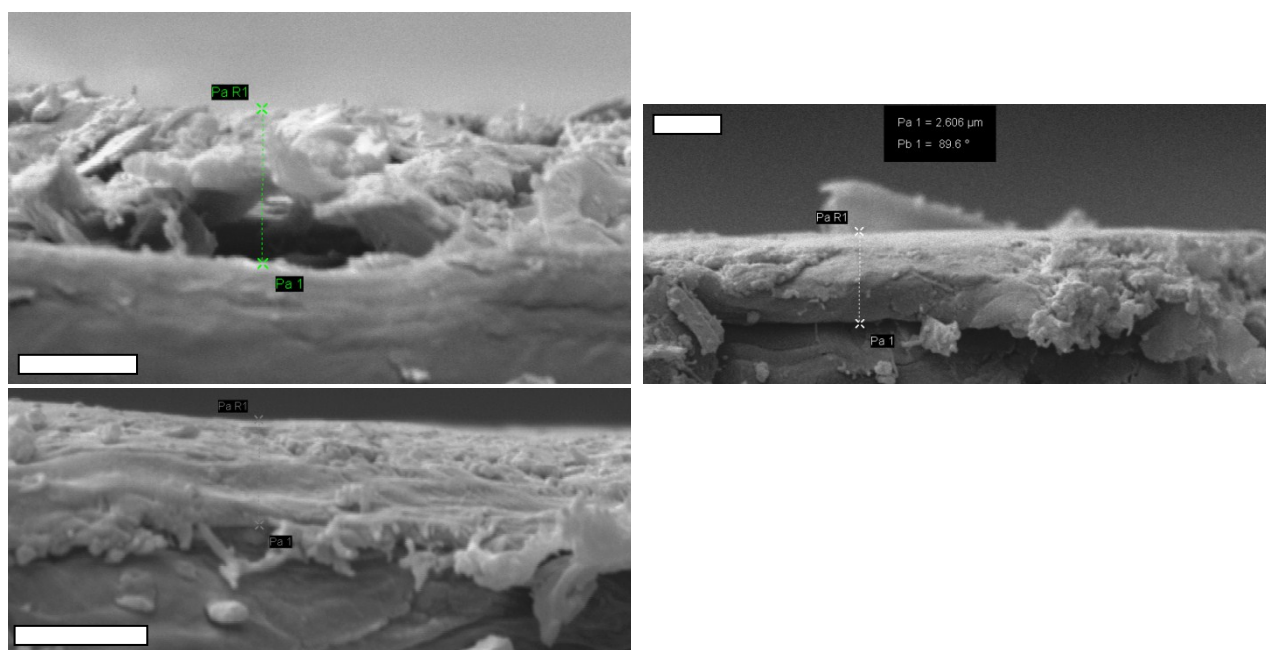

Fig. S2. Characteristic SEM images of the hybrid *pG/MWNT-f-OH* thin films from the cross sectional area after compression. The measured mean thickness is about 2.5 μm. The bars are 2 μm.
