3. HPLC spectra	7

1. General information

All manipulations of oxygen- and moisture-sensitive materials were conducted with a standard Schlenk technique under a purified argon atmosphere. Solvents were reagent grade and purified by standard techniques. ^1H NMR and ^{13}C NMR spectra were recorded on a 300 MHz spectrometer. Chemical shifts were reported as δ values in ppm and referenced to using tetramethylsilane as an internal. All reactions were monitored by TLC with silica gel-coated plates and visualized with a UV light at 254 nm. Optical rotations were reported as follows: $[\alpha]_{\text{D}}^{\text{T}}$ ($c = \text{g}/100 \text{ mL}$, solvent).
