General information and materials

¹H NMR and ¹³C NMR spectra were recorded in CDCl₃ with TMS as internal standard (400 MHz ¹H, 100 MHz ¹³C) at room temperature. All commercially available reagent and chemicals were purchased from chemical suppliers and used as received without further purification. Column chromatography was performed on silica gel (200-300 mesh). Mass analyses and HRMS were obtained by ESI on a TOF mass analyzer.

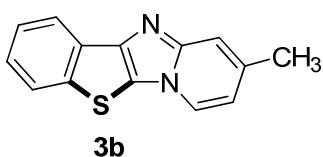

General procedure for synthesis of compounds 3a-3u and 3a-3u:

A 25 mL Schlenk tube equipped with a magnetic stirring bar was charged with substituted 2-(2-bromophenyl)imidazo[1,2-*a*]pyridines (**1**) (0.3 mmol), K₂S (0.6 mmol), CuI (0.03 mmol), 1,10-Phen (0.03mmol), and DMF (2 mL). Then the mixture was allowed to stir under air atmosphere at 120°C for 24 h. After completion of the reaction, the resulting solution was removed with the aid of a rotary evaporator. The residue was purified by column chromatography on silica gel using petroleum ether/ethyl acetate as eluent to provide the desired product.
