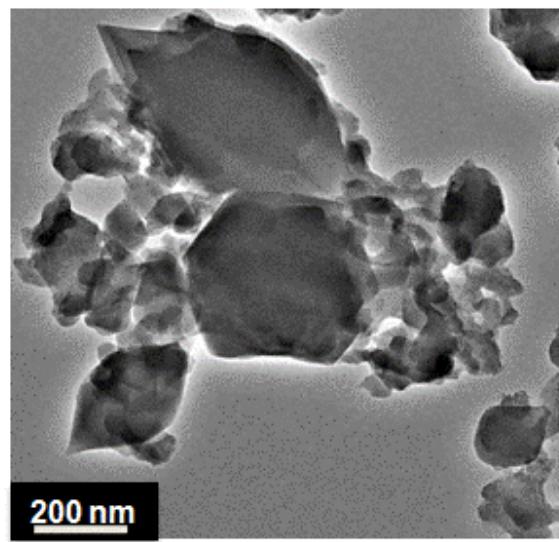

Fig.S1 TEM image of MIL-88B (Fe) with typical needle shaped crystal.

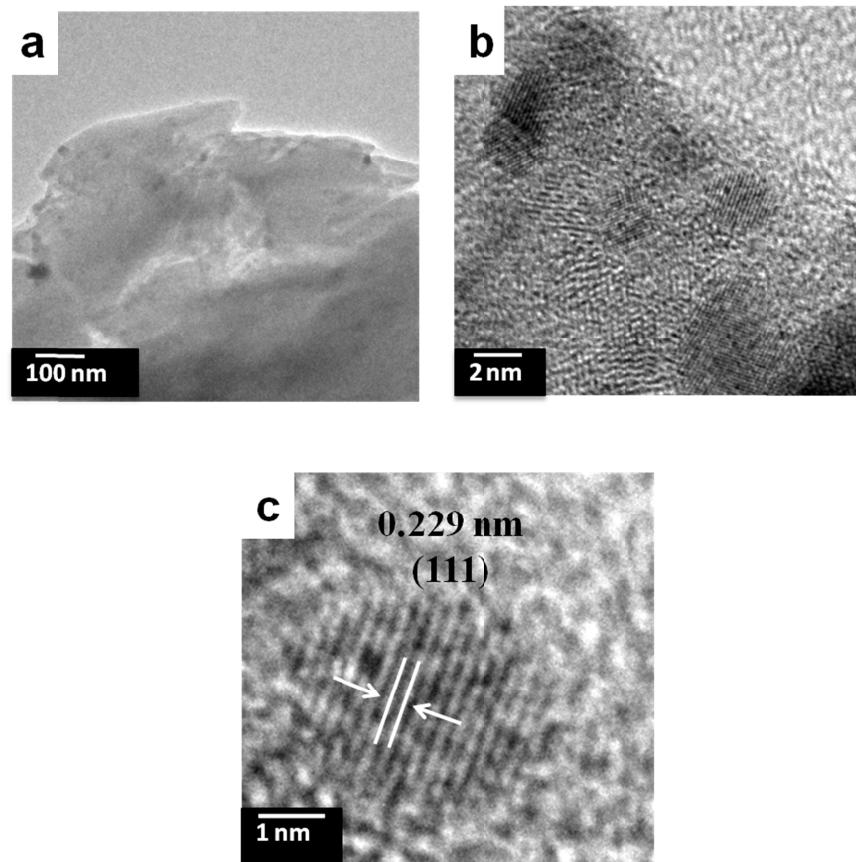

Fig.S2 TEM image of a few \sim 3 nm Pd nanoparticle formed in MIL-88B (Fe) structure.

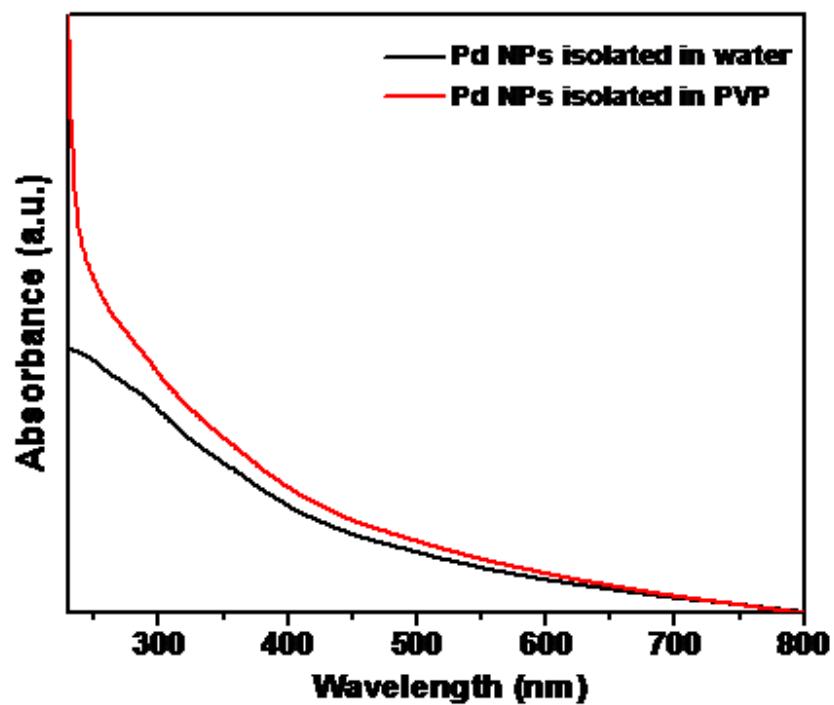

Fig. S3 UV-vis absorption spectra of Pd nanostructures isolated by complete dissolution of host MIL-88B (Fe) framework in free form as well as with PVP as stabilizing agent.

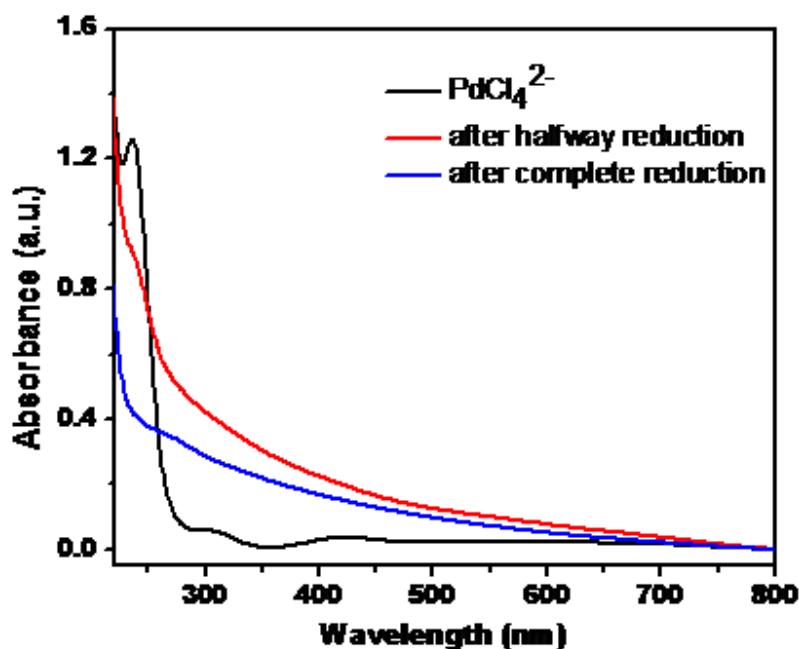

Fig. S4 UV-vis absorption spectra of Pd NPs directly synthesized from PdCl_4^{2-} after chemical reduction with NaBH_4 in PVP medium.

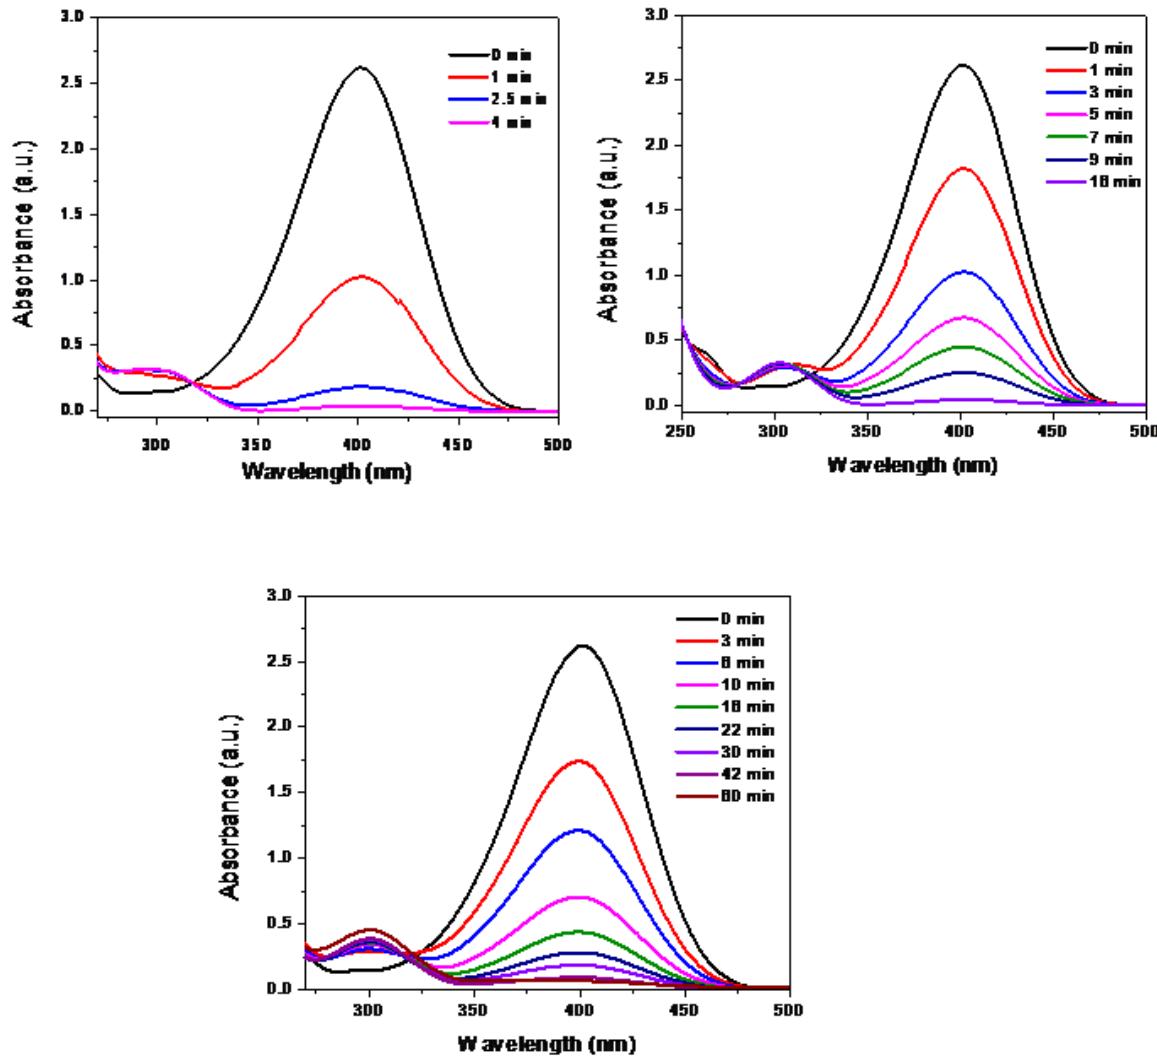

Fig. S5 UV-vis absorption spectra showing catalytic reduction of 4-NP to 4-AP by (a) Pd @MIL-88B(Fe) (b) PVP- Pd NCs isolated from host framework and (c) bare Pd nanostructures.

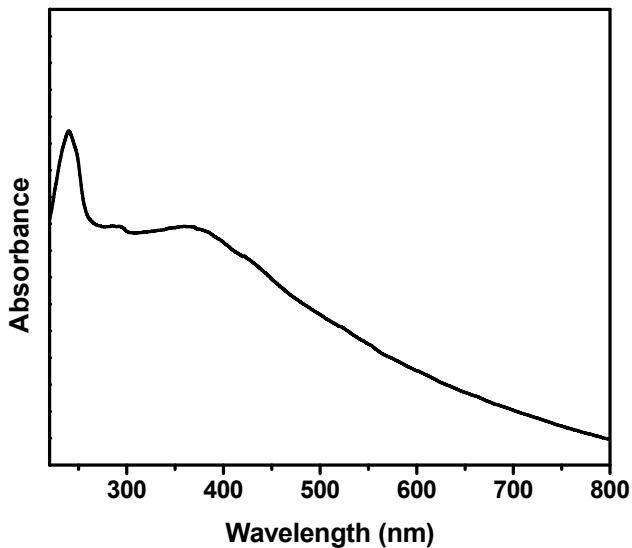

Fig. S6 UV-vis absorption spectrum of Pd@MIL-88B(Fe) after first cycle of catalytic reaction using excess borohydride solution. The absorption profile remains same to the as synthesized material.
