

Electronic Supplementary Information (ESI)

Table S1 Potentiometric titration conditions for the pKa determination of picolinate (denoted as HL)

| Titr. No. | T, K | C_L^0 , mM | C_H^0 , mM | V^0 , mL | $C_{\text{titrant}}(\text{NaOH})$, mM | V_{titrant} , mL |
|-----------|------|--------------|--------------|------------|--|---------------------------|
| 1 | 283 | 8.395 | 9.056 | 18.13 | 101.0 | 2.00 |
| 2 | 298 | 8.400 | 9.073 | 18.12 | 101.0 | 2.00 |
| 3 | 313 | 8.405 | 9.056 | 18.12 | 101.5 | 2.00 |
| 4 | 328 | 8.355 | 9.045 | 18.12 | 101.5 | 2.00 |
| 5 | 343 | 12.69 | 13.65 | 24.14 | 101.5 | 3.50 |

Table S2 Calorimetric titration conditions for the enthalpy determination of picolinate (denoted as HL) protonation

| Titr. No. | T, K | C_L^0 , mM | C_H^0 , mM | V^0 , mL | $C_{\text{titrant}}(\text{HClO}_4)$, mM | V_{titrant} , mL |
|-----------|------|--------------|--------------|------------|--|---------------------------|
| 1 | 298 | 13.49 | 1.300 | 0.900 | 91.5 | 0.230 |
| 2 | 298 | 61.50 | 5.911 | 0.900 | 91.5 | 0.220 |

Table S3 Selected speciation data points of Fig. 4. Speciation simulation conditions: $C_{\text{Np}} = 0.10$ M (constant), $C_L = 0.30$ M (constant), pH varied from 0.5 to 5.0, $I = 1.0$ M NaClO₄

| pH | Molar Fraction (% relevant to total concentration of Np) | | | | | |
|-------|--|-------|-----------------------------------|-------|----------------------------|-------|
| | NpO_2^+ | | $\text{NpO}_2\text{L}(\text{aq})$ | | NpO_2L_2^- | |
| | 298 K | 343 K | 298 K | 343 K | 298 K | 343 K |
| 0.500 | 97.23 | 97.93 | 2.76 | 2.07 | 0.01 | 0.00 |
| 0.725 | 95.46 | 96.58 | 4.52 | 3.40 | 0.02 | 0.01 |
| 0.950 | 92.65 | 94.42 | 7.30 | 5.55 | 0.05 | 0.03 |
| 1.175 | 88.36 | 91.04 | 11.51 | 8.87 | 0.13 | 0.09 |
| 1.400 | 82.11 | 85.96 | 17.55 | 13.81 | 0.33 | 0.23 |
| 1.625 | 73.63 | 78.76 | 25.58 | 20.68 | 0.79 | 0.57 |
| 1.850 | 63.04 | 69.28 | 35.21 | 29.41 | 1.75 | 1.31 |
| 2.075 | 51.07 | 57.93 | 45.34 | 39.29 | 3.59 | 2.79 |
| 2.300 | 38.88 | 45.64 | 54.35 | 48.88 | 6.77 | 5.48 |
| 2.525 | 27.73 | 33.70 | 60.51 | 56.41 | 11.77 | 9.89 |
| 2.750 | 18.50 | 23.27 | 62.61 | 60.34 | 18.88 | 16.38 |
| 2.975 | 11.57 | 15.04 | 60.37 | 59.94 | 28.06 | 25.02 |
| 3.200 | 6.80 | 9.12 | 54.41 | 55.50 | 38.79 | 35.38 |
| 3.425 | 3.76 | 5.21 | 46.04 | 48.15 | 50.19 | 46.64 |
| 3.650 | 1.97 | 2.81 | 36.76 | 39.40 | 61.27 | 57.79 |
| 3.875 | 0.97 | 1.45 | 27.85 | 30.65 | 71.18 | 67.90 |
| 4.100 | 0.46 | 0.72 | 20.16 | 22.90 | 79.39 | 76.38 |
| 4.325 | 0.21 | 0.35 | 14.08 | 16.67 | 85.71 | 82.98 |
| 4.550 | 0.09 | 0.17 | 9.62 | 12.04 | 90.29 | 87.79 |
| 4.775 | 0.04 | 0.09 | 6.54 | 8.82 | 93.42 | 91.09 |
| 5.000 | 0.02 | 0.05 | 4.52 | 6.69 | 95.47 | 93.26 |

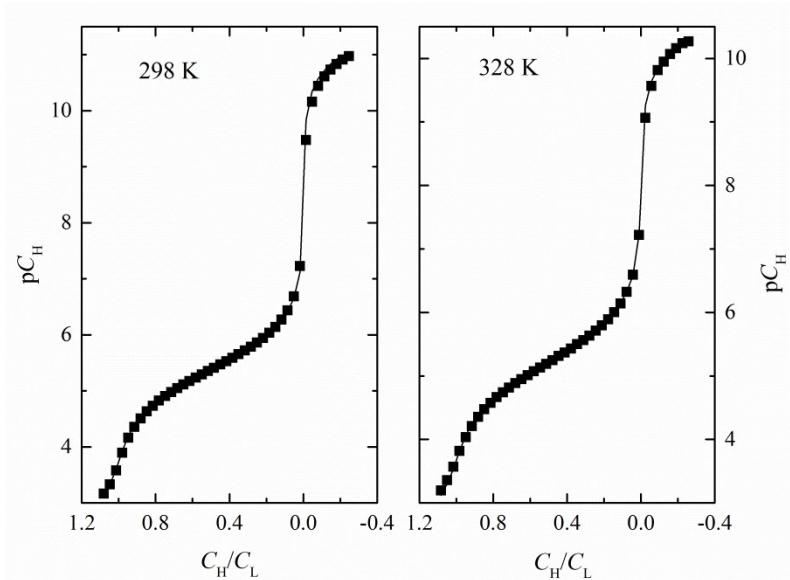

Fig. S1 Fitting of potentiometric titration data for the pK_a determination at 298 and 328 K. Experimental conditions can be found in Table S1. Symbol (■): measured; solid line: calculated

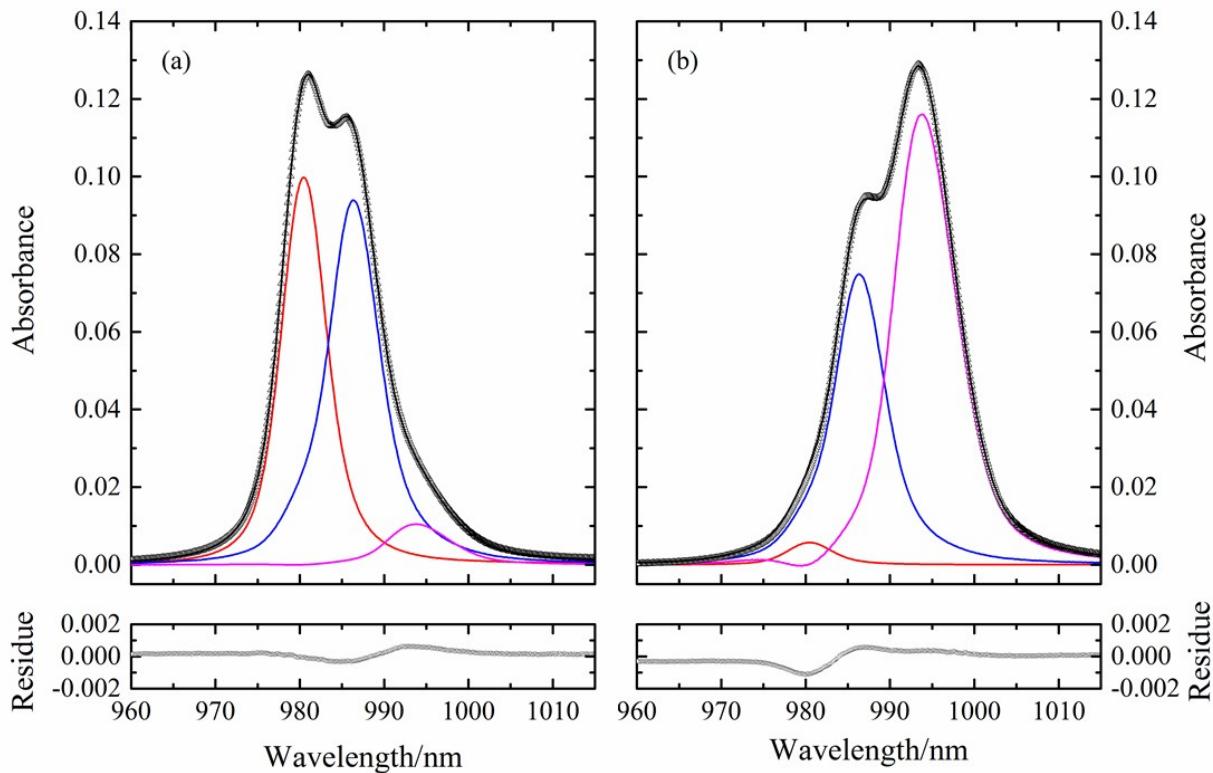

Fig. S2 Spectrum deconvoluted results from the 298 K spectrophotometric titration. (a) $V_{\text{titrant}} = 0.030 \text{ mL}$; (b) $V_{\text{titrant}} = 0.110 \text{ mL}$. The detailed titration conditions could be found in Table S1. Symbol (Δ): observed absorbance; Solid lines: Calculated absorbance (black), deconvoluted absorbance of NpO_2^+ (red), $\text{NpO}_2\text{L}(\text{aq})$ (blue) and NpO_2L_2^- (magenta).

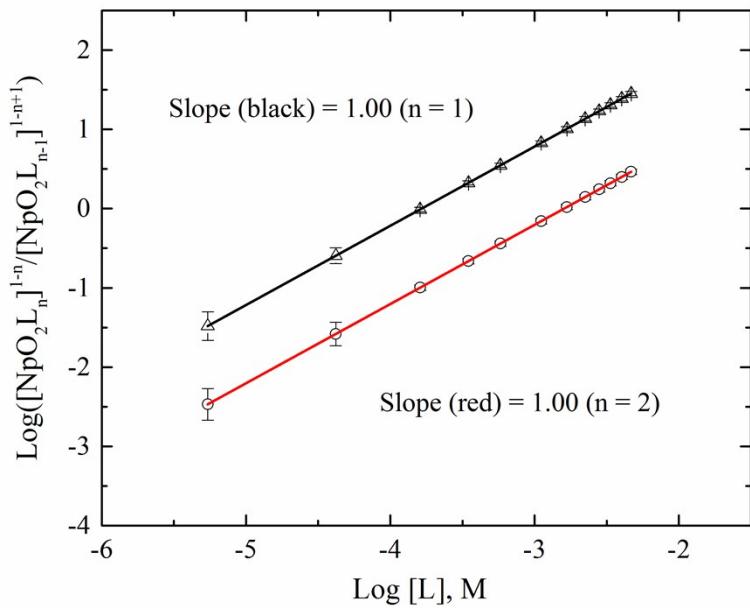

Fig. S3 Slope analysis for the stepwise formation of $\text{NpO}_2(\text{L})_n^{1-\text{n}}$ ($n=1,2$) in the spectrophotometric titration at 298 K. (L = picolinate)

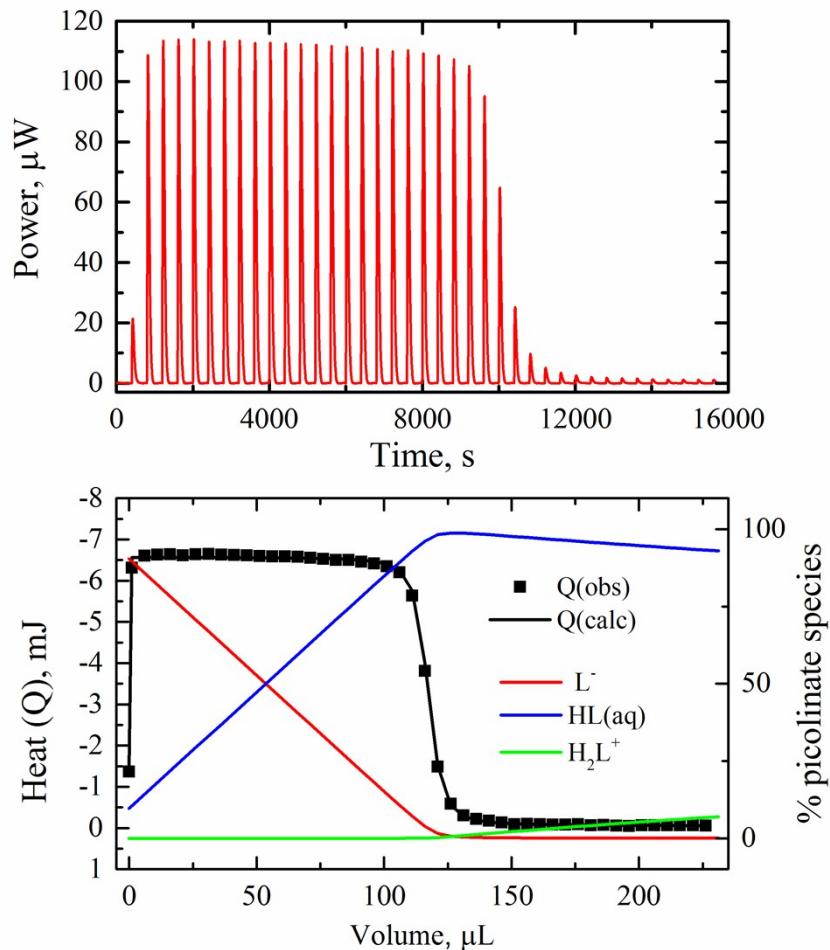

Fig. S4 Calorimetric titration of picolinate protonation (titration NO. 2 in Table S2). Upper graph: thermogram (dilution heat not corrected); lower graph: fitting and speciation. Note: the second protonation of picolinate was included in the fitting using its literature protonation constant $\log K_{\text{H}2} = 0.95$.¹⁶ The resulting enthalpy value is $-(1.65 \pm 1.2) \text{ kJ.mol}^{-1}$, which quite well agrees with the literature value (-2.1 kJ.mol^{-1} from the Martel database¹⁶).
