## 1. Synthesis and Characterization:

## 1. Synthesis of Annulated TTF-pyrroles

Compounds $\mathbf{1},{ }^{[1]} \mathbf{2},{ }^{[2]} \mathbf{3}{ }^{[3]}$ were prepared according to literature procedures.

## Synthesis of 4:

The synthetic precursors $7^{[1]}$ and $\mathbf{8}^{[4]}$ were prepared according to literature procedures.

In accord with the scheme given above, a mixture of 5-tosyl-5H-[1,3]dithiolo[4,5-c]pyrrol-2one ( $1.20 \mathrm{~g}, 3.85 \mathrm{mmol}$ ) and $[1,3]$ dithiolo[4,5-c]furan-2-thione ( $1.00 \mathrm{~g}, 5.78 \mathrm{mmol}$ ) in neat triethylphosphite ( 50 ml ) was stirred for 6 hours at $140^{\circ} \mathrm{C}$ and then cooled to room temperature. Addition of 100 ml of MeOH into the reaction mixture led to precipitation of a yellow solid (4a), which was then collected by filtration. To a solution of $\mathbf{4 a}$ in a mixture of methanol ( 100 ml ) and THF $(100 \mathrm{ml})$ were added 10 equivalents of sodium methoxide $(30 \%$ in MeOH$)$. The mixture was then heated to $50^{\circ} \mathrm{C}$ for 30 min and concentrated under reduced pressure until the volume was 50 ml . The reaction mixture was poured into 200 ml of an aqueous solution of $\mathrm{NH}_{4} \mathrm{Cl}$. The yellow precipitate that resulted was collected by filtration and washed with water. The yellow solid obtained in this way was purified by column chromatography (silica gel, $\mathrm{CH}_{2} \mathrm{Cl}_{2} /$ hexanes $=2: 1$, eluent) to give 4 in the form of a yellow solid $(0.21 \mathrm{~g}, 0.19 \mathrm{mmol}, 19 \%)$.

4: ESI-MS: $m / z$ calcd for $\mathrm{C}_{10} \mathrm{H}_{5} \mathrm{NOS}_{4}$ : 282.9254; found: 282.9254; ${ }^{1} \mathrm{H}$ NMR (400MHz, $\left.\left(\mathrm{CD}_{3}\right)_{2} \mathrm{SO}, 25^{\circ} \mathrm{C}, \mathrm{TMS}\right) \delta[\mathrm{ppm}]: 11.15(\mathrm{~s}, \mathrm{br}, 1 \mathrm{H}), 7.66(\mathrm{~s}, 2 \mathrm{H}), 6.81(\mathrm{~d}, 2 \mathrm{H}, 2.8 \mathrm{~Hz}),{ }^{13} \mathrm{C}$ NMR (400MHz, $\left.\left(\mathrm{CD}_{3}\right)_{2} \mathrm{SO}, 25^{\circ} \mathrm{C}, \mathrm{TMS}\right) \delta[\mathrm{ppm}]: 111.11,116.93,117.07,124.50,124.48,134.35$

## Synthesis of 5:

The synthetic precursor $\mathbf{9}^{[5]}$ was prepared according to a literature procedure.

In accord with the scheme given above, a mixture of 5-tosyl-5H-[1,3]dithiolo[4,5-c]pyrrol-2one ( $1.20 \mathrm{~g}, 3.85 \mathrm{mmol}$ ) and $[1,3]$ dithiolo[4,5-b]pyrazine-2-thione ( $1.08 \mathrm{~g}, 5.78 \mathrm{mmol}$ ) in neat triethylphosphite ( 50 ml ) was stirred for 6 hours at $140{ }^{\circ} \mathrm{C}$ and then cooled to room temperature. Addition of 100 ml of MeOH into the reaction mixture led to precipitation of an orange solid (5a), which was collected by filtration. To a solution of $\mathbf{5 a}$ in a mixture of methanol ( 100 ml ) and THF ( 100 $\mathrm{ml})$ were added 10 equivalents of sodium methoxide $(30 \%$ in MeOH$)$. The mixture was then heated to $50{ }^{\circ} \mathrm{C}$ for 30 min and concentrated under reduced pressure until the volume was 50 ml . The reaction mixture was poured into 200 ml of an aqueous solution of $\mathrm{NH}_{4} \mathrm{Cl}$. The orange precipitate that resulted was collected by filtration and washed with water. The yellow solid obtained in this way was purified by column chromatography (silica gel, $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ eluent) to give 5 in the form of an orange solid ( 0.30 g , $0.26 \mathrm{mmol}, 26 \%)$.

5: ESI-MS: $m / z$ calcd for $\mathrm{C}_{10} \mathrm{H}_{5} \mathrm{~N}_{3} \mathrm{~S}_{4}$ : 294.9366; found: 294.9366; ${ }^{1} \mathrm{H}$ NMR (400MHz, $\left.\left(\mathrm{CD}_{3}\right)_{2} \mathrm{SO}, 25^{\circ} \mathrm{C}, \mathrm{TMS}\right) \delta[\mathrm{ppm}]: 11.22(\mathrm{~s}, \mathrm{br}, 1 \mathrm{H}), 8.25(\mathrm{~s}, 2 \mathrm{H}), 6.87(\mathrm{~d}, 2 \mathrm{H}, 2.8 \mathrm{~Hz}),{ }^{13} \mathrm{C}$ NMR $\left(400 \mathrm{MHz},\left(\mathrm{CD}_{3}\right)_{2} \mathrm{SO}, 25^{\circ} \mathrm{C}, \mathrm{TMS}\right) \delta[\mathrm{ppm}]: 98.70,111.13,116.44,126.18,140.32,156.18$.

## Synthesis of 6:

The synthetic precursor $\mathbf{1 0}^{[6]}$ was prepared according to a literature procedure.

In accord with the scheme given above, a mixture of 5-tosyl-5H-[1,3]dithiolo[4,5-c]pyrrol-2one ( $2 \mathrm{~g}, 6.42 \mathrm{mmol}$ ) and $[1,3]$ dithiolo[4,5-c][1,2,5]thiadiazol-5-one ( $1.68 \mathrm{~g}, 9.63 \mathrm{mmol}$ ) in neat triethylphosphite ( 60 ml ) was stirred for 6 hours at $140{ }^{\circ} \mathrm{C}$ and then cooled to room temperature. Addition of 100 ml of MeOH into the reaction mixture led to precipitation of a yellow solid (6a), which was collected by filtration. To a solution of $\mathbf{6 a}$ in a mixture of methanol ( 120 ml ) and THF ( 120 $\mathrm{ml})$ were added 10 equivalents of sodium methoxide $(30 \%$ in MeOH$)$. The mixture was then heated to $50^{\circ} \mathrm{C}$ for 30 min and concentrated under reduced pressure until the volume was 50 ml . The reaction mixture was poured into 200 ml of an aqueous solution of $\mathrm{NH}_{4} \mathrm{Cl}$. The orange precipitate that resulted was collected by filtration and washed with water. The yellow solid obtained in this way was purified by column chromatography (silica gel, $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ eluent) to give $\mathbf{6}$ in the form of a yellow solid ( 0.12 g , $0.061 \mathrm{mmol}, 6.2 \%$ ).

6: ESI-MS: $m / z$ calcd for $\mathrm{C}_{8} \mathrm{H}_{3} \mathrm{~N}_{3} \mathrm{~S}_{5}$ : 300.8931; found: 300.8931; ${ }^{1} \mathrm{H}$ NMR (400MHz, $\left.\left(\mathrm{CD}_{3}\right)_{2} \mathrm{SO}, 25^{\circ} \mathrm{C}, \mathrm{TMS}\right) \delta[\mathrm{ppm}]: 11.26(\mathrm{~s}, \mathrm{br}, 1 \mathrm{H}), 6.88(\mathrm{~d}, 2 \mathrm{H}, 4 \mathrm{~Hz}), 6.87(\mathrm{~d}, 2 \mathrm{H}, 2.8 \mathrm{~Hz}),{ }^{13} \mathrm{C}$ NMR $\left(400 \mathrm{MHz},\left(\mathrm{CD}_{3}\right)_{2} \mathrm{SO}, 25^{\circ} \mathrm{C}, \mathrm{TMS}\right) \delta[\mathrm{ppm}]: 104.65,114.54,116.28,129.96,158.69$.

## 4. Electrochemical Studies

Figure S23. Cyclic voltammogram of 1 in acetonitrile containing $1 \mathrm{M} \mathrm{TBAPF}_{6}$ at a glassy carbon electrode vs. a $\mathrm{Ag} / \mathrm{AgCl}$ reference electrode with scan rate of $100 \mathrm{mV} / \mathrm{s}$.

Figure S24. Cyclic voltammogram of 2 in acetonitrile containing $1 \mathrm{M} \mathrm{TBAPF}_{6}$ at a glassy carbon electrode vs. a $\mathrm{Ag} / \mathrm{AgCl}$ reference electrode with a scan rate of $100 \mathrm{mV} / \mathrm{s}$.

Figure S25. Cyclic voltammogram of 3 in acetonitrile containing $1 \mathrm{M} \mathrm{TBAPF}_{6}$ at a glassy carbon electrode vs. $\mathrm{Ag} / \mathrm{AgCl}$ reference elecrtrode with scan rate of $100 \mathrm{mV} / \mathrm{s}$.

Figure S26. Cyclic voltammogram of 4 in acetonitrile containing $1 \mathrm{M} \mathrm{TBAPF}_{6}$ at a glassy carbon electrode vs. a $\mathrm{Ag} / \mathrm{AgCl}$ reference electrode with a scan rate of $100 \mathrm{mV} / \mathrm{s}$.

Figure S27. Cyclic voltammogram of 5 in acetonitrile containing $1 \mathrm{M} \mathrm{TBAPF}_{6}$ at a glassy carbon electrode vs. a $\mathrm{Ag} / \mathrm{AgCl}$ reference electrode with a scan rate of $100 \mathrm{mV} / \mathrm{s}$.

Figure S28. Cyclic voltammogram of 6 in acetonitrile containing $1 \mathrm{M} \mathrm{TBAPF}_{6}$ with scan rate of 100 $\mathrm{mV} / \mathrm{s}$ vs. a $\mathrm{Ag} / \mathrm{AgCl}$ reference electrode with a scan rate of $100 \mathrm{mV} / \mathrm{s}$.

## 4. Single crystal X-ray data of 5

The X-ray crystallographic data for the structure of 5 were collected on a Nonius Kappa CCD diffractometer using a graphite monochromator with $\mathrm{MoK} \alpha$ radiation ( $\lambda=0.71073 \AA$ ). The data were collected at 153 K using an Oxford Cryostream low temperature device. Details of crystal data, data collection and structure refinement are listed in Table S2. Data reduction were performed using DENZO-SMN. ${ }^{[7]}$ The structure was solved by direct methods and refined by full-matrix least-squares on $\mathrm{F}^{2}$ with anisotropic displacement parameters for the non-H atoms using SHELXL-97. ${ }^{[8]}$ The hydrogen atoms were calculated in ideal positions with isotropic displacement parameters set to 1.2 xUeq of the attached atom ( 1.5 xUeq for methyl hydrogen atoms). All the calculations were carried out with the SHELXTL program. Further details of the individual structures can be obtained from the Cambridge Crystallographic Data Centre by quoting reference numbers CCDC-1404846.

Table S2. Crystal data and structure refinement for 5.

| Parameter |  |
| :---: | :---: |
| Chemical formula | $\mathrm{C}_{10} \mathrm{H}_{5} \mathrm{~N}_{3} \mathrm{~S}_{4}$ |
| Formula mass | 295.41 |
| Crystal system | Monoclinic |
| Space group | P $21 / n$ |
| Crystal color | Orange |
| a (Å) | 8.1660(4) |
| b (Å) | 9.3650(5) |
| c (Å) | 15.1600(9) |
| a (deg) | 90 |
| $\beta$ (deg) | 102.045(2) |
| $Y$ (deg) | 90 |
| Volume ( $\AA^{3}$ ) | 1133.83(11) |
| Z | 4 |
| Temperature (K) | 153(2) |
| $\theta$ range | 2.63 to 27.50 deg |
| Completeness to $\theta$ | 99.3 \% |
| Reflections collected / unique | $4691 / 2598$ |
| $\mathrm{R}_{\text {int }}$ | 0.0693 |
| Absorption correction | Gaussian |
| Data/restraints/parameters | $2598 \text { / } 0 \text { / } 154$ |
| Goodness-of-fit on $\mathrm{F}^{2}$ | 1.041 $R_{l}=0.0638$ |
| Final R indices [I>2 $\mathbf{( I )}$ ] | $\begin{aligned} & R_{l}=0.0638 \\ & w R_{2}=0.1086 \end{aligned}$ |
| R indices (all data) | $\begin{aligned} & R_{l}=0.1265 \\ & w R_{2}=0.1257 \end{aligned}$ |
| CCDC number | CCDC-1404846 |

Figure S29. Two views of the X-ray single crystal structure of 5. Displacement ellipsoids are scaled to the $50 \%$ probability level.

## 5. DFT Calculations for 1-6

The geometry-optimized structures and associated energetic calculations were carried out at the B3LYP 6-31G*(d) level of theory using the commercially available Spartan'10 Window program.
