## Caption of Content

1. **Table S1.** Selected bond angles ( $^{\circ}$ ) for **1–3**
2. **Table S2.** Fitting of the Cole-Cole plots for **3** with a generalized Debye model in the temperature range 1.9–5.0 K under 800 Oe dc field
3. **Table S3.** Fitting of the Cole-Cole plots for **3'** with a generalized Debye model in the temperature range 1.9–3.4 K under zero dc field
4. **Table S4.** Shape analysis for the metal centers of **3**
5. **Fig. S1** Left: crystal structure of complex  $[(\text{NiL}_1)\text{Gd}(\text{L}_2)(\text{CH}_3\text{OH})]\cdot\text{acetone}$  (**1**). Right: crystal structure of complex  $[(\text{NiL}_1)\text{Tb}(\text{L}_2)(\text{CH}_3\text{OH})]\cdot\text{acetone}$  (**2**). Hydrogen atoms and uncoordinated solvents are omitted for clarity. (Ln green, Ni turquoise, S yellow, O red, N blue and C gray)
6. **Fig. S2** (a) acetone molecule connects to the  $\text{Ni}^{\text{II}}\text{-Dy}^{\text{III}}$  clusters *via* weak  $\text{C-H}\cdots\text{O}$  (green dashed line) and  $\text{C-H}\cdots\pi$  (pink dashed line) interactions (b) Every two neighbouring clusters are linked together to give a dimer through  $\text{C-H}\cdots\pi$  interaction between solvent and the framework in **3**. (c)  $\text{C-H}\cdots\pi$  interactions drive the dimers to a 1D chain along *b* axis.
7. **Fig. S3** TGA curves for complexes **1–3**.
8. **Fig. S4** The XRPD patterns (red lines) obtained from the as-synthesized solids of **1–3** and the simulated XRPD patterns (blue lines) from single crystals of **1–3**.
9. **Fig. S5** Left: field-dependent magnetizations for **1** at  $T = 1.9\text{--}5.0$  K and  $H = 0\text{--}70$  kOe. Right: temperature dependence of magnetic entropy change ( $-\Delta S_m$ ) as calculated from the magnetization data of **1** at  $T = 1.9\text{--}5.0$  K and  $0\text{--}70$  kOe.
10. **Fig. S6** Frequency-dependent in-phase  $\chi'$  and out-of-phase  $\chi''$  ac susceptibility signals for **3** at the indicated temperatures under zero dc field.
11. **Fig. S7** Temperature-dependent in-phase  $\chi'$  and out-of-phase  $\chi''$  ac susceptibility signals for **3** at the indicated frequencies under zero dc field.
12. **Fig. S8** Plot of out-of-phase  $\chi''$  *versus* frequency at 1.9 K for **3** under the application of variable dc fields, ranging from 0 to 3000 Oe.

- 13. Fig. S9** The XRPD pattern of complex **3'** is consistent with that of complex **3**.
- 14. Fig. S10** Frequency-dependent in-phase  $\chi'$  and out-of-phase  $\chi''$  ac susceptibility signals for **3'** at the indicated frequencies under zero dc field.
- 15. Fig. S11** Cole-Cole plots for **3'** under zero dc field. The solid lines represent the fit to the Debye model at the indicated temperatures.
- 16. Fig. S12** Temperature-dependent in-phase  $\chi'$  and out-of-phase  $\chi''$  ac susceptibility signals for **2** at the frequency of 999 Hz under zero dc field.
- 17. Fig. S13** Temperature-dependent in-phase  $\chi'$  and out-of-phase  $\chi''$  ac susceptibility signals for **2** at the frequency of 999 Hz under 800 Oe dc field.

**Table S1.** Selected bond angles (°) for **1–3**
