Computational studies

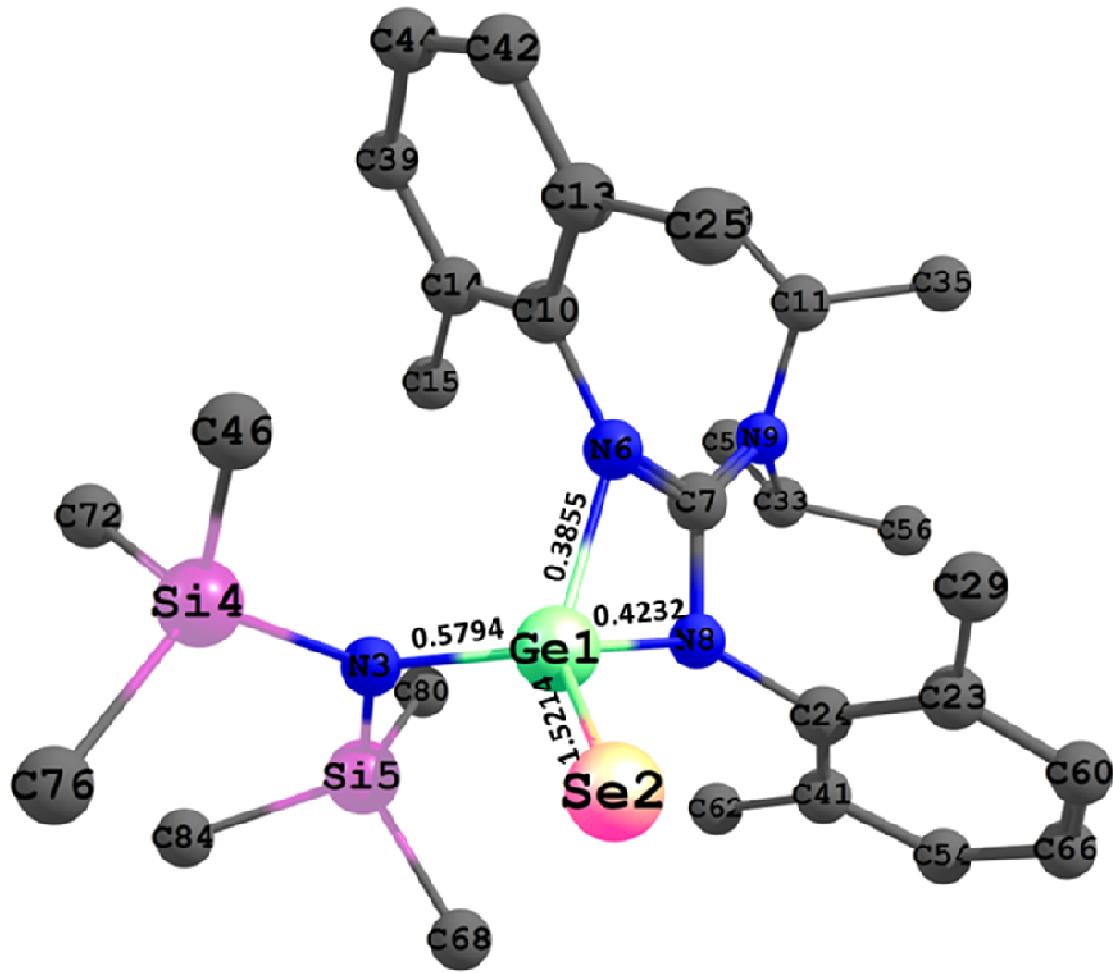

The Wiberg Bond Index (WBI) was computed at B3LYP/6-31+G(d) level of theory. The atomic coordinates were taken from the .cif files of compounds **3** & **4** and no further geometry optimization was carried out. The Wiberg Bond Index (WBI) of Ge–S in compound **3** and Ge–Se in compound **4** are 1.49 and 1.52, respectively, indicating the existence of double bond between germanium and sulfur or selenium atoms.

(40.48%) 0.6362*Ge 1 s(54.66%)p 0.82(45.01%)d 0.01(0.33%)
