Figure S1. The Fourier difference maps of the final model to the initial synchrotron XRD dataset of cell 2. The observed positive intensities are relatively weak. Left shows a higher cutoff intensity and right a lower cutoff intensity. Purple octahedral represent $\text{Fe}_{2/3}\text{Mn}_{1/3}\text{O}_6$ with oxygen in red, yellow and white spheres represent sodium with the proportion of yellow indicating sodium occupancy and the yellow non-spherical objects illustrating positive Fourier intensities.

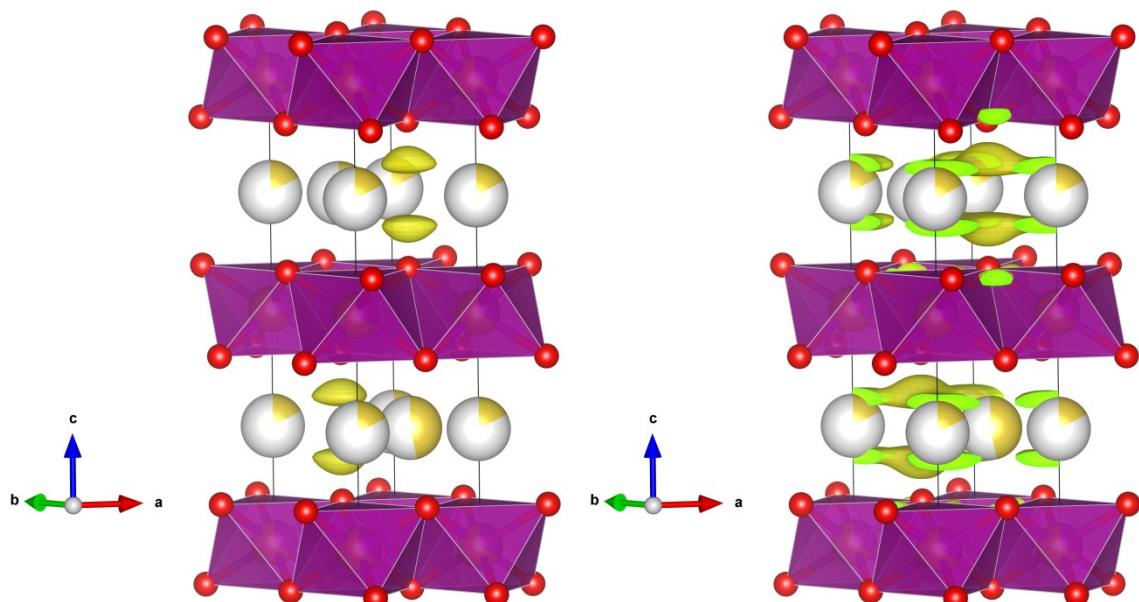

Figure S2. Rate performance of the P2 electrode charge and discharged at C/2.5 and 1C rates in conventional cells.
