Spontaneous Helical Structure Formation in Laminin Nanofibers

John M. Szymanski, Mengchen Ba, and Adam W. Feinberg

Movie 1. A time-lapse release of the laminin nanofibers during thermally-triggered dissolution of the PIPAAm surface.

Movie 2. An animation of a 3D confocal image of a Lam95 helical nanofiber rendered using Imaris image processing software. The 'layers' in the fiber are due to slight movement of the floating nanofiber during the confocal imaging process.
