

†Electronic Supplementary Information (ESI) for

Li₂MnO₃: a rare red coloured manganese(IV) oxide that exhibits tunable red-yellow-green emission

S. Tamilarasan , Sourav Laha, S. Natarajan and J. Gopalakrishnan

Solid State and Structural Chemistry Unit, Indian Institute of Science, Bangalore 560012, India

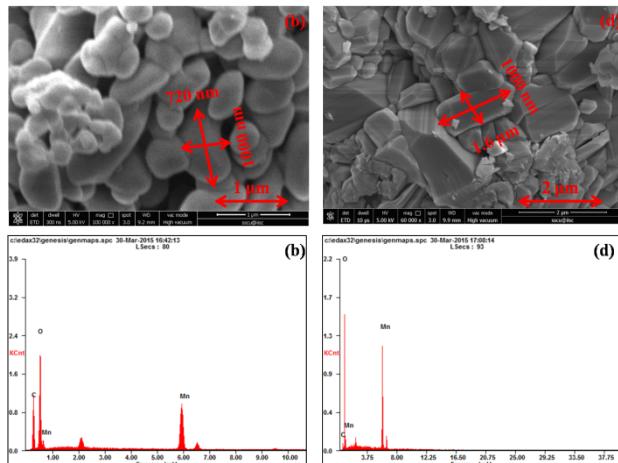

Fig. S1 SEM images and EDX spectra of Li₂MnO₃ samples (b) and (d).

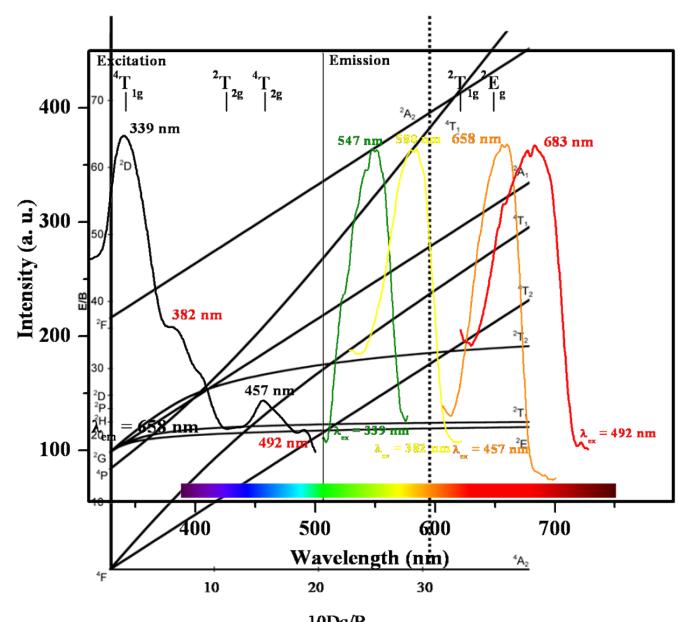

Fig. S2 Tanabe-Sugano diagram (TSD) of d³ ion. Vertical line parallel to y-axis corresponds to 10Dq/B parameter of Li₂MnO₃ (Sample d).

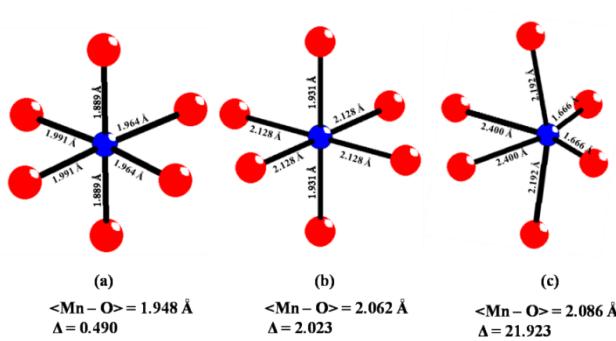

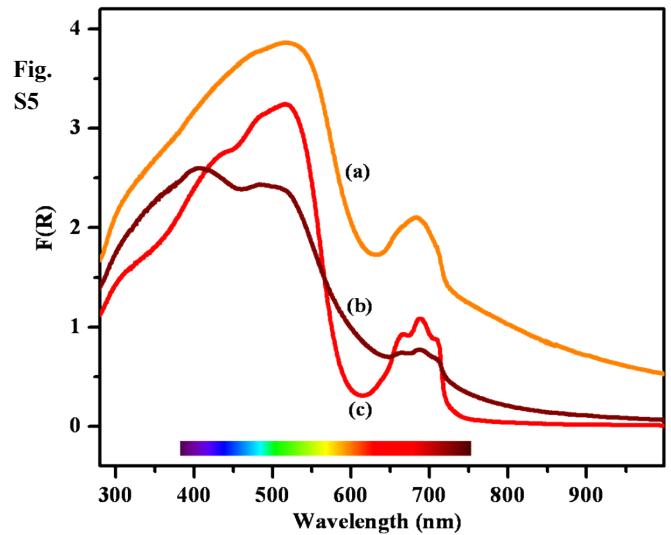

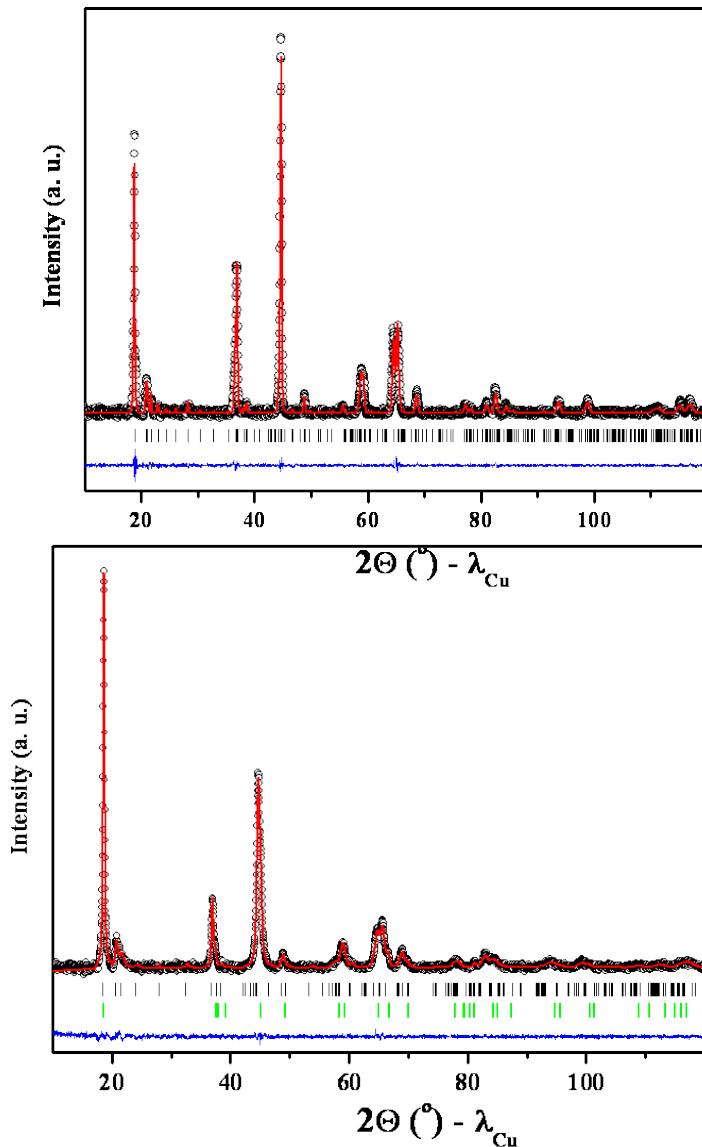

Fig. S3 MnO₆ octahedra in Li₂MnO₃ (Sample d): (a) Mn at Mn (4g) site, (b) Mn at Li (2b) site in [Li_{1/3}Mn_{2/3}] layer and (c) Mn at Li (4h) site in the interslab. Mn-O bond lengths and octahedral distortion parameter Δ are indicated. $\Delta = 1/6\Sigma [\{(r - \langle r \rangle)/\langle r \rangle\}^2]10^3$ where r is bond length and $\langle r \rangle$ is average bond length.

Fig. S4 Excitation and Emission spectra of Li₂MnO₃ (Sample c). Calculated energy levels of Mn(IV) in Mn(IV) site (4g) are shown by black vertical bars (|).

Rietveld refinement of Li₂Mg_{0.67}Al_{0.66}Mn_{0.67}O₄. Observed (o), calculated (—) and difference (bottom blue line) profiles are shown. The vertical bars (|) indicate Bragg reflections.

Fig. S6 Rietveld refinement of Li₃AlMnO₅. Observed (o), calculated (—) and difference (bottom blue line)

profiles are shown. The vertical black bars (|) and green bars (||) indicate Bragg reflections of $\text{Li}_3\text{AlMnO}_5$ and $\alpha\text{-LiAlO}_2$ phases respectively.

Fig. S7 UV-vis spectra of (a) $\text{Li}_2\text{Mg}_{0.67}\text{Al}_{0.66}\text{Mn}_{0.67}\text{O}_4$ (b) $\text{Li}_3\text{AlMnO}_5$ and (c) Li_2MnO_3 (Sample c).

Table S1. Rietveld refinement of $\text{Li}_2\text{Mg}_{0.67}\text{Al}_{0.66}\text{Mn}_{0.67}\text{O}_4$
