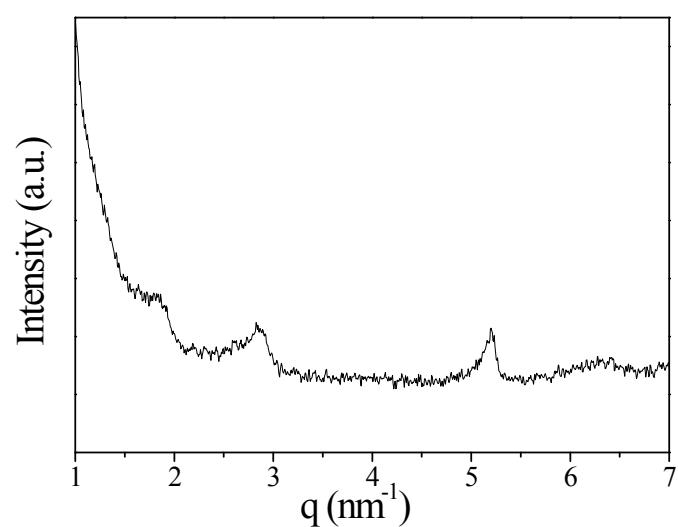

**Figure S2** Fluorescence spectra of 15 mg  $\text{mL}^{-1}$  Tyloxapol aqueous solutions with different concentrations of  $\alpha$ -CD.

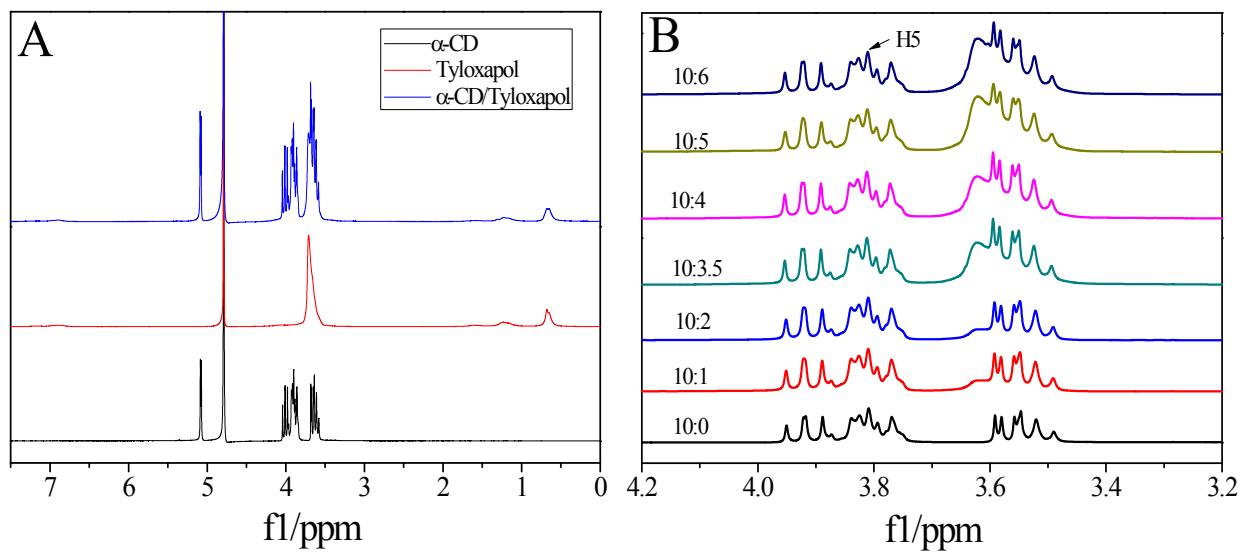

**Figure S3** The original microscopy images of supramolecular hydrogel formed by 100 mg  $\text{mL}^{-1}$   $\alpha$ -CD/15 mg  $\text{mL}^{-1}$  Tyloxapol (A, B) and 100 mg  $\text{mL}^{-1}$   $\alpha$ -CD/40 mg  $\text{mL}^{-1}$  Tyloxapol (C, D) under white (A, C) and UV (B, D) light, respectively.

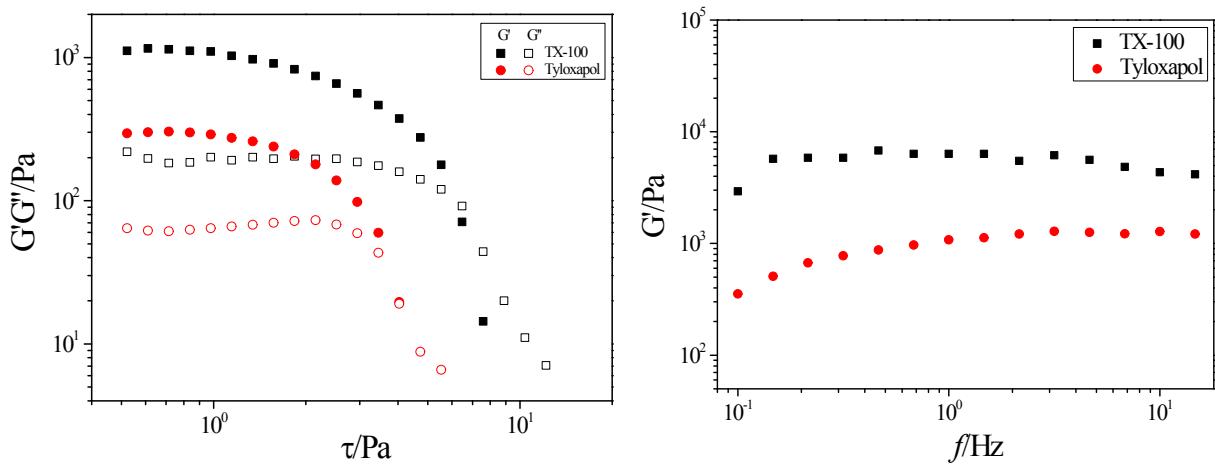

**Figure S4** 2D <sup>1</sup>H-<sup>1</sup>H ROESY NMR result of 10 mg mL<sup>-1</sup>  $\alpha$ -CD/6 mg mL<sup>-1</sup> Tyloxapol mixed system in D<sub>2</sub>O.

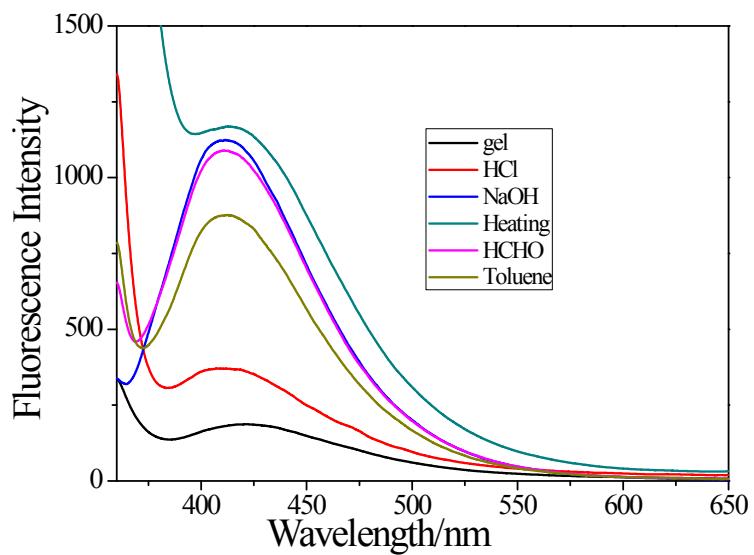

**Figure S5** SAXS result of freeze-dried hydrogels of 100 mg mL<sup>-1</sup>  $\alpha$ -CD/40 mg mL<sup>-1</sup> Tyloxapol

**Figure S6**  $^1\text{H}$ NMR results of (A)  $\alpha$ -CD, Tyloxapol and  $\alpha$ -CD/Tyloxapol in  $\text{D}_2\text{O}$ , (B) The amplification part of A (3.2-4.2 ppm of  $^1\text{H}$ NMR results). (C) The chemical shifts change of  $\alpha$ -CD H5 versus Tyloxapol concentration ( $C_{\alpha\text{-CD}} = 10 \text{ mg mL}^{-1}$ ).

**Figure S7** Rheological results of hydrogels with 15 mg mL<sup>-1</sup> of TX100 or Tyloxapol and fixed concentration of  $\alpha$ -CD at 100 mg mL<sup>-1</sup>: (A)  $G'$  and  $G''$  as a function of the applied stress at a constant frequency (1.0 Hz) and (B) variation of  $G'$  as a function of frequency.

**Figure S8** Fluorescence spectra of 100 mg mL<sup>-1</sup>  $\alpha$ -CD/15 mg mL<sup>-1</sup> Tyloxapol hydrogels with different additives as indicated inset.
