

Supplementary figure legends:

Figure1. Hematopoietic progenitor cells colony formation assay (40×). CD34⁺ HPCs were treated with and plated in triplicate in semi-solid methylcellulose culture for colony-forming cell (CFC) assays and the colony-forming were observed under microscope at 12 days after initiating seeding. A: CFU-E; B: BFU-E; C: CFU-M; D: CFU-G; E: CFU-GM; F: CFU-GEMM
