

Supporting Information

Optimized Conditions for Enrichment of N-Linked Glycopeptides with Amine-Functionalized Mesoporous Silica Nanoparticles

The peptides were first dissolved in a sodium acetate buffer (100 mM sodium acetate and 150 mM NaCl, pH = 5.5). Then the peptides were oxidized at R. T. in the dark with 10 mM sodium periodate. Sodium sulfite was added to the solution until a final concentration of 20 mM after 1 hour of incubation. The mixture was incubated for another 10 min with shaking at R. T. in the dark. The oxidized samples were lyophilized and redissolved in the coupling solution of 70% methanol and 30% acetic acid (v/v) with a final concentration of 0.5 mg/mL. Amine-functionalized nanoparticles were prewashed by the coupling solution and then added to the peptide sample with a final concentration of 2 mg/mL. After shaking for 0.5 hour at room temperature, sodium cyanoborohydride was added to the reaction system with a final concentration of 1 M. The suspension was under shaking for another 0.5 hour at room temperature. After incubation, nanoparticles were washed by the following solutions sequentially twice: coupling solution, water, 80% ACN/20% H₂O (v/v), 50 mM NH₄HCO₃. The as-cleaned nanoparticles were re-dispersed in 50mM NH₄HCO₃ aqueous solution with a concentration of 4 mg/mL. At last, PNGase F (500 units per μ L) were added until a concentration of 1 U/mL and the suspension was kept under shaking at 37 °C for 3 hours. The supernatant was collected through centrifugation for MALDI-MS analysis.

Table S1. Result of Fmoc UV assay

	Sample 1	Sample 2	Sample 3
SBA-15-APTES-Fmoc/ $\times 10^{-3}$ g	6.52	8.64	12.56
Average OD	0.7749	0.8023	0.8632
-NH ₂ / $\times 10^{-8}$ mol	259.5	334.8	502.3
Content of -NH ₂ / $\times 10^{-5}$ mol·g ⁻¹	39.80	38.75	39.99

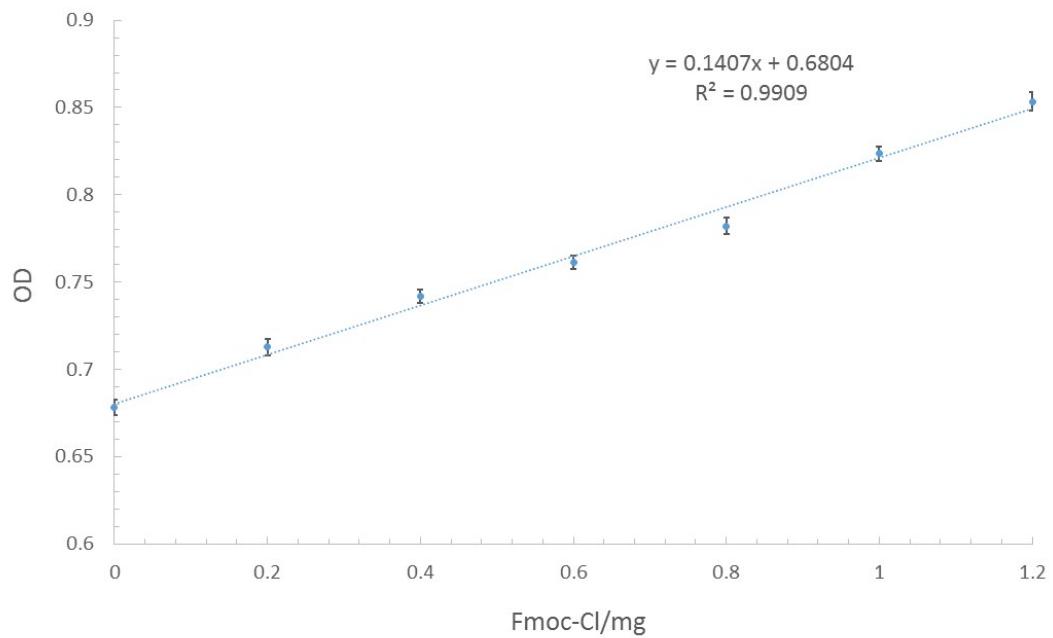

Fig S1. The standard curve of Fmoc UV assay

Table S2. List of identified glycoproteins from 5 µL human serum after solid phase extraction with amino-functionalized SBA-15 after three parallel runs, N# denotes the N-linked glycosylation site.

No.	Protein	Description	N-linked deglycosylated Peptide sequence
