

Supplemental material:

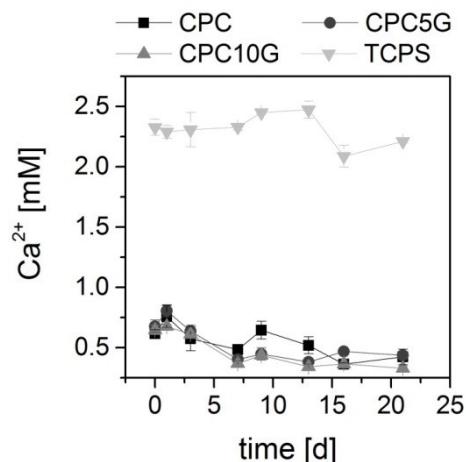

Fig. S1 Ca^{2+} -concentrations in cell culture medium during immersion of CPC and CPC/MBG composites over 21 days.

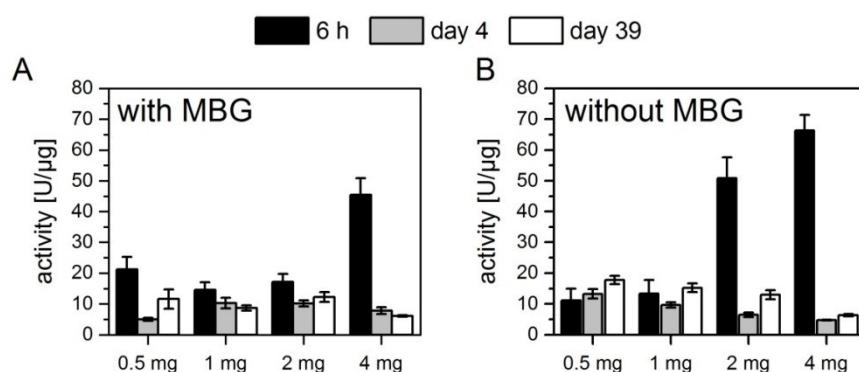

Fig. S2 Enzyme activity of Lyz released from CPC5G (A) and CPC (B) over 39 days.

Table S1: Parameters determined by a *Korsmeyer-Peppas-fit* ($Y = k \cdot t^n$, where Y is the cumulative release within the time t , k is a constant and the release exponent n indicating the release mechanism) of the release profiles of Lyz and VEGF from CPC and CPC10G.

	a	±	b	±	R²	
CPC
