Part 1. Thermodynamic Correction

For the stepwise CO adsorption at different coverage, the stepwise CO adsorption free energy correction $\Delta E_{ads}(\text{correction})$ is defined by the following equation:

$$\parallel E_{ads}(\text{correction}) = (E_{ZPE} + U^\theta - TS^\theta)_{CO\ n+1/\text{slab}} - \left[(E_{ZPE} + U^\theta - TS^\theta)_{CO\ n/\text{slab}} + (E_{ZPE} + H^\theta - TS^\theta)_{CO} \right]$$

On the other hand, for the stepwise CO dissociation process, the dissociation free energy barrier correction $\Delta E_d(\text{correction})$ is defined by the following equation:

$$\parallel E_d(\text{correction}) = (E_{ZPE} + U^\theta - TS^\theta)_{TS} - (E_{ZPE} + U^\theta - TS^\theta)_{IS}$$

The dissociation reaction free energy correction $\Delta E_{dis}(\text{correction})$ is defined by the following equation:

$$\parallel E_{dis}(\text{correction}) = (E_{ZPE} + U^\theta - TS^\theta)_{FS} - (E_{ZPE} + U^\theta - TS^\theta)_{IS}$$

Table S1 The stepwise CO adsorption energies (eV) for the most stable adsorption configurations of CO on Ni surfaces at different coverage with and without the dispersion correction. Zero-point energy corrections, thermal energy corrections and entropies are not included.

Method	Surface	nCO								
		1	2	3	4	5	6	7	8	9
DFT	Ni(111)	-1.93	-1.92	-1.87	-1.47	-1.12	-0.86	-0.16	-0.04	4.68
DFT-D		-1.93	-1.92	-1.87	-1.47	-1.12	-0.86	-0.16	-0.04	4.68
DFT	Ni(100)	-2.01	-1.98	-1.91	-1.88	-1.68	-1.54	-1.46	-1.63	-0.51
DFT-D		-2.01	-1.97	-1.92	-1.88	-1.68	-1.54	-1.46	-1.64	-0.51
DFT	Ni(110)	-1.83	-1.82	-1.76	-1.83	-1.72	-1.76	-1.50	-1.33	-1.42
DFT-D		-1.83	-1.82	-1.76	-1.83	-1.72	-1.76	-1.51	-1.33	-1.42

Table S2 The test results about the effect of vacuum thickness, supercell size and slab layers on the energy of the single CO molecule on different Ni(111), (100) and (110) surface models. Zero-point energy corrections, thermal energy corrections and entropies are not included.

Ni(111) surface models			E_{ads}/eV
Vacuum thickness	10 Å		-1.93
	12 Å	4 layers- $p(3\times 3)$	-1.93
	15 Å		-1.92
Slab thickness	3 layers		-1.82
	4 layers	$p(3\times 3)$ -10 Å	-1.93
	5 layers		-1.96
Supercell size	$p(3\times 3)$		-1.93
	$p(3\times 4)$	4 layers-10 Å	-1.95
	$p(4\times 4)$		-1.96
Ni(100) surface models			E_{ads}/eV
Vacuum thickness	10 Å		-1.96
	12 Å	4 layers- $p(3\times 3)$	-1.96
	15 Å		-1.96
Supercell size	3 layers		-2.00
	4 layers	$p(3\times 3)$ -10 Å	-2.01
	5 layers		-1.98
Slab thickness	$p(3\times 3)$		-1.96
	$p(3\times 4)$	4 layers-10 Å	-2.01
	$p(4\times 4)$		-2.03
Ni(110) surface models			E_{ads}/eV
Vacuum thickness	10 Å		-1.95
	12 Å	4 layers- $p(3\times 3)$	-1.95
	15 Å		-1.98
Supercell size	$p(3\times 3)$		-1.95
	$p(3\times 4)$	4 layers-10 Å	-1.98
	$p(4\times 4)$		-2.00
Slab thickness	4 layers		-1.95
	5 layers	$p(3\times 3)$ -10 Å	-1.83
	6 layers		-1.87

Figure S1 The most stable adsorption configurations of CO, C and O atoms on Ni(111), (100) and (110) surfaces. The Ni, C and O atoms are shown in the blue, grey and red balls, respectively. Zero-point energy corrections, thermal energy corrections and entropies are not included.

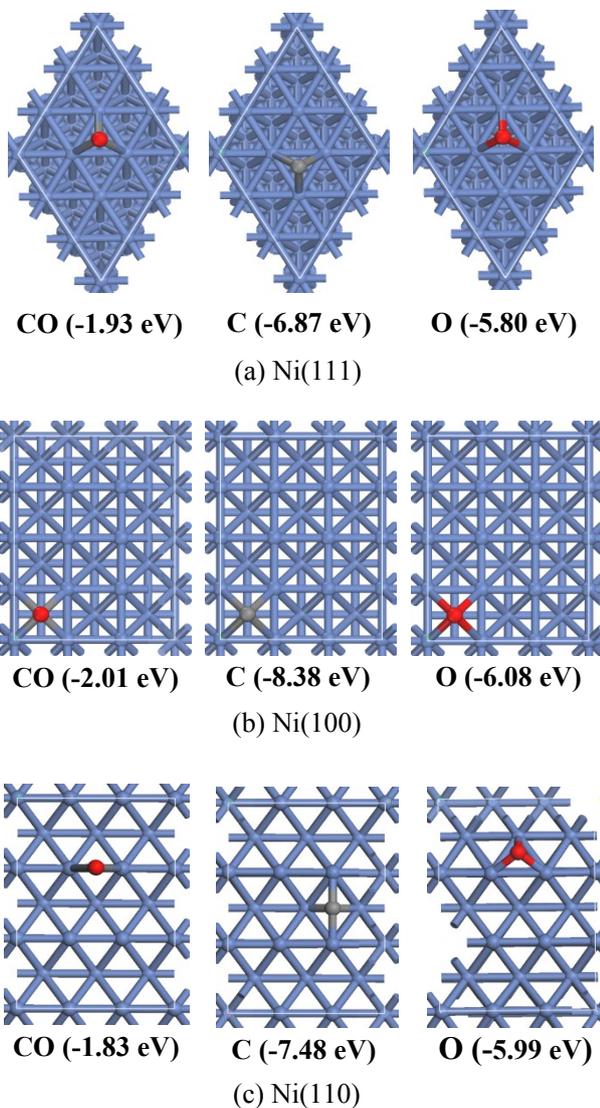

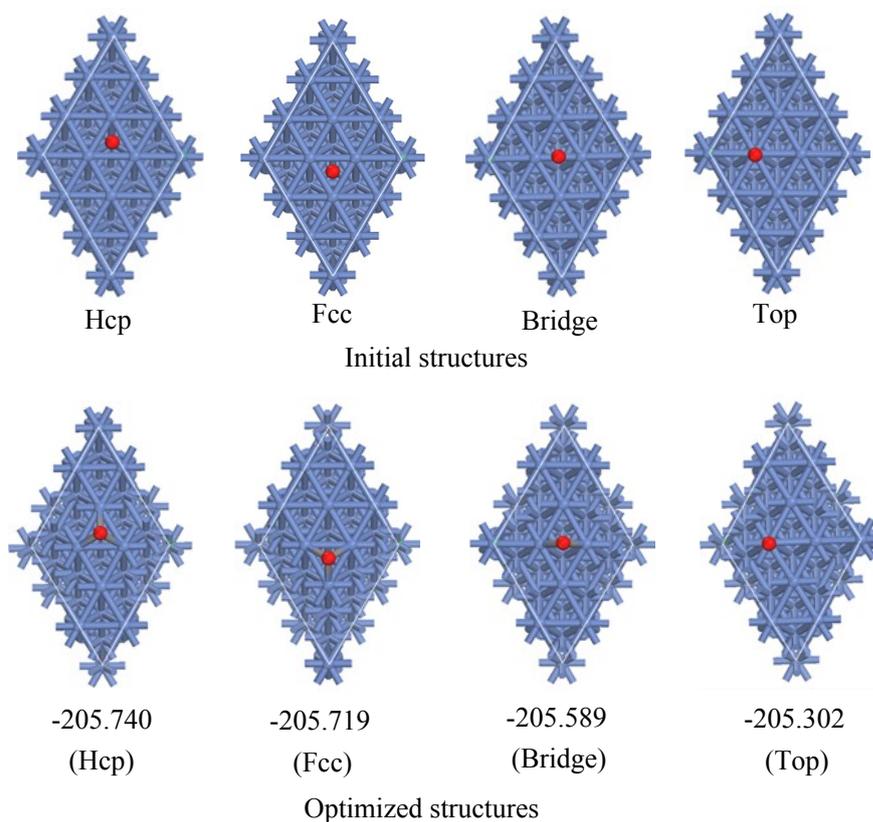

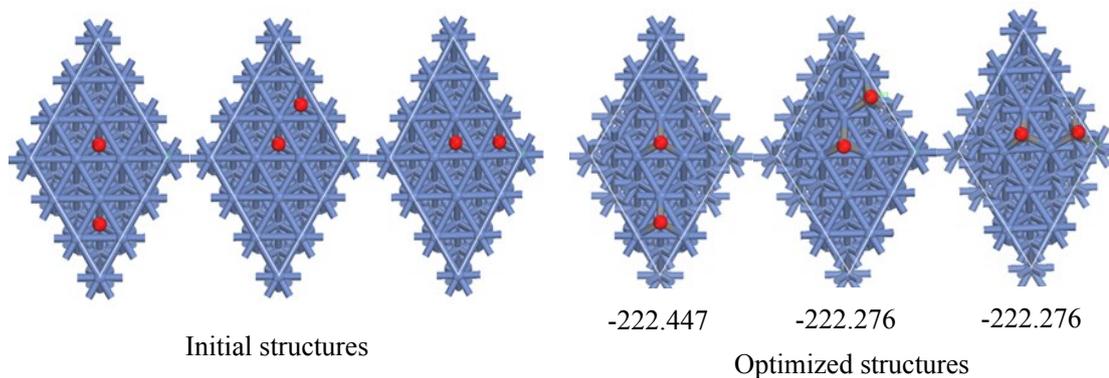

Figure S2 The initial and optimized structures, as well as the total energy (eV) with adsorbed CO molecules on Ni(111) surface at different coverage. The blue, grey and red balls stand for Ni, C and O atoms, respectively. Zero-point energy corrections, thermal energy corrections and entropies are not included.
