## SUPPLEMENTARY INFORMATION - PART I

Table S1. Cartesian coordinates for the global-minimum structure of $\mathrm{B}_{15}{ }^{+} C_{2 \mathrm{v}}\left({ }^{1} \mathrm{~A}_{1}\right)$ and its corresponding $C_{2 \mathrm{v}}$ transition state at the PBE0/6-311+G* level.

Figure S1. Canonical molecular orbitals (CMOs) for the subset of eleven peripheral $\sigma$ bonds in the $C_{2 \mathrm{v}}\left({ }^{1} \mathrm{~A}_{1}\right)$ global minimum of $\mathrm{B}_{15}{ }^{+}$cluster. These CMOs are readily localized as two-center two-electron (2c-2e) $\sigma$ bonds.

Figure S2. Canonical molecular orbitals (CMOs) of the $C_{2 v}\left({ }^{1} \mathrm{~A}_{1}\right)$ transition state of $\mathrm{B}_{15}{ }^{+}$cluster. (a) Eleven peripheral $\sigma$ bonds, which can be localized as $2 \mathrm{c}-2 \mathrm{e}$ bonds. (b) Five delocalized $\sigma$ bonds. (c) Two delocalized $\sigma$ bonds associated with the inner rhombic $\mathrm{B}_{4}$ core. (d) Four delocalized $\pi$ bonds. The CMOs for the (a), (b), and (d) subsets show one-to-one correspondence to each other, from bottom up.

Figure S3. Chemical bonding in the $C_{2 \mathrm{v}}$ transition state of $\mathrm{B}_{15}{ }^{+}$. (a) The electron localization functions (ELFs). (b) Bonding elements as revealed from the adaptive natural density partitioning (AdNDP) analysis. The occupation numbers (ONs) are shown.

Figure S4. Optimized structure of the $C_{2 v}$ global minimum of $\mathrm{B}_{14}{ }^{-}$cluster at the PBE0/6-311+G* level.

Figure S5. Evolution of electron localization function, $\operatorname{ELF}_{\sigma}$, against the bifurcation value for the $C_{2 \mathrm{v}}$ global minimum of $\mathrm{B}_{15}{ }^{+}$cluster. Note that for the rhombic B1B2B12B11 unit, the $\mathrm{ELF}_{\sigma}$ data is consistent with one four-center island only, rather than two three-center islands (B1B2B12 and B11B1B12), supporting the AdNDP scheme presented in Fig. 5(b).

## SUPPLEMENTARY INFORMATION - PART II

A short movie extracted from the BOMD simulation for $\mathrm{B}_{15}{ }^{+}$. Each frame of the snapshot is reoriented horizontally. The simulation is performed at 500 K for over 60 ps and the movie roughly covers a time span of 30 ps .

Figure S1. Canonical molecular orbitals (CMOs) for the subset of eleven peripheral $\sigma$ bonds in the $C_{2 \mathrm{v}}\left({ }^{1} \mathrm{~A}_{1}\right)$ global minimum of $\mathrm{B}_{15}{ }^{+}$cluster. These CMOs are readily localized as two-center two-electron (2c-2e) $\sigma$ bonds.

Figure S2. Canonical molecular orbitals (CMOs) of the $C_{2 v}\left({ }^{1} \mathrm{~A}_{1}\right)$ transition state of $\mathrm{B}_{15}{ }^{+}$ cluster.
